50 cts.

**MÄRKLIN  
ELECTRIC TRAINS  
ARE BEST FOR...**

... the exciting first train. A beautiful gift box with sturdy locomotive, cars with automatic couplers, track oval and a powerful transformer. Everything assembles in minutes for the beginning of a lifetime hobby.

... the exciting train that grows. This catalog shows hundreds of add-on items. The smaller ones are best for the small beginning layout. All will be used in the larger model railroad to follow.

... the train that's made to be played with. Small locomotives and cars are easy to put on the track, seldom come off the track even at high speed. All are copies of real railroad equipment, yet the track can be laid across the floor for playing with blocks and other toys.

... the worlds largest assortment of trains and accessories. We developed H0 trains in 1936 after 50 years experience with the larger gauges.

... the miniature railway for people who want to run trains, not just look at them. If it can be done by the real trains it can be done by MÄRKLIN trains—real easily.

MÄRKLIN model railways offer features that are exclusive with our system:

- 1) The reliable current distribution of MÄRKLIN H0 track.
- 2) The use of A.C. current for both trains and accessories.

These two features combine to provide you a model railroad that is always reliable and trouble free. With our simple A.C. transformers there is no need to know electrical wiring. Less wiring is required with the color coded, plug in system. Less cleaning of rails, wheels, gears and motors. No soldering needed, no special wire connecting clips.

**MÄRKLIN H0 Gauge Track**

There are two types: the MÄRKLIN-M-(Metal) track and the MÄRKLIN-K-(Plastic) track. Both types offer the same reliable electrical distribution characteristics and are also equal in their ability to feed current from the center studs to the ski-type current pick ups on the locomotives.

The basic construction of the two types of track differs. With the M-Track, perfectly formed black rails are mounted on an all metal roadbed featuring simulated ties and rock ballast. In contrast, the K-Track consists of finely detailed plastic ties, into the bottom of which is inserted a metal center rail conductor in such a way as to allow only the points of the contacts to barely project, almost invisibly, upwards through the ties. The silver colored, metal profile rails are securely mounted onto the plastic ties.

There are three electrical connections on the M-Track. A sprung metal tongue on the center stud

section and two all metal railjoiners at each end of the rails.

With the new K-track, there are six mechanical connections as follows: 2 running rail joiners, two spring connectors for the center stud section and two snap connectors on the plastic tie base.

This MÄRKLIN stud contact system provides the most reliable current distribution for model railroads. The current is fed through the almost invisible center studs located in the center of the ties, and is then led to the ski type current pickups located on the bottom of the locomotives, the pickups being barely visible when the locomotive is on the track. Although contact between the pickup and only one stud point would be sufficient, the pickup actually rest on several contacts at one time, and therefore also keep the contacts always clean.

The path of the current is from the center studs to the pickup shoe, to the motor and then flows through all the locomotive and tender wheels to the running rails and finally back to the transformer. As you can see this provides a system that will give you good current pickup even when a certain part of the rails or wheels are dirty.

Because of this three rail system, any configuration of track can be laid, crossings, reverse loops, turning wyes, etc. without any special switches or wiring.

The MÄRKLIN track system is designed so that almost any layout form can be designed, yet a triple mainline layout, with sidings, will fit on a trainboard no more than 36" wide. Adapter track sections are available which will connect the M-Track to the new K-Track.

YOUR FRIENDLY MÄRKLIN DEALER:

DISTRIBUTED through REEVES INTERNATIONAL, INC., 11 07 Broadway, New York 1 00 10

## A.C. Current Operates Everything

The trains, lights, turnouts, points signals and all the other exciting accessories all operate off reliable A.C. current; never a need for two types of power supply. Even the TELEX coupling requires the same basic current only.

## Every MÄRKLIN Locomotive Reverses by Remote Control

The same throttle knob that controls the speed of the train reverses the locomotive. Even small hands learn precise train control quickly. Our exclusive reverse unit, mounted in the locomotive, allows any train to be run over the entire track system, regardless of the wiring or the track configuration. This feature is especially useful when used with our automatic train control, running over changing routes.

## The MÄRKLIN Overhead Catenary

Special clip on mast and flexible contact wires allow an easily assembled, easily changed catenary system.

The locomotives with pantographs actually can pick up power from the overhead wires. A hand lever on the bottom of the locomotive changes the current pickup from the rails to the overhead wires.

For maximum operation with your MÄRKLIN locomotives, the catenary wires can be connected to a separate transformer from the rails. This will allow you to run two separate locomotives on the same section of track, completely independent of each other.

## Locomotives have extra pulling power

All MÄRKLIN Locomotives, large and small, have special rubber tires and precision gearing to the drive wheels, for greater pulling power. Trains coast to a realistic stop when the power is turned off.

## Track may be insulated at any point

Simply insert paper between the center tongues on M-Track, or the plastic insulator on K-Track. No other equipment of special pieces of track are needed.

## The MÄRKLIN Couplers

The MÄRKLIN couplers mounted in the center of the ends of all equipment so that they can be placed on the track in either direction. All the different types of couplers will mate with each other.

## The Automatic Couplers

Simply push the cars together and they are automatically coupled. Lift the end of the car and they are uncoupled, or use electric uncoupling track for a more realistic train operation. Its easy and foolproof for fun operation.

## RELEX, the automatic coupler with delayed uncoupling action

With this coupler, after the cars are uncoupled over the uncoupling track, the couplers remain

open allowing you to push the cars farther down the track for more realistic yard switching. All model freight cars and passenger coaches are equipped with MÄRKLIN RELEX couplers.

## The TELEX coupler, the ultimate system

Some locomotives (see pages 8, 11 and 20) are fitted with the TELEX couplers. This is operated from the transformer, through the reverse unit, allowing you to uncouple the locomotive from the train anywhere on the layout, without any other special equipment. The TELEX coupler system is another exclusive feature of MÄRKLIN trains.

## MÄRKLIN Signals for added enjoyment

Our vast range of signals help you complete your model railroad. Our famous automatic multi-train control can be installed easily by non-experts. Color coded wires plug into contact tracks, and the moving trains do the rest.

## MÄRKLIN is easy to set up

Basic instructions with clear illustrations, printed in English, are provided with all equipment. Books include track plans, signal manuals and general handbooks.

Our No. I Gauge and MINEX Trains are described on pages 56–64.

# TRAIN SETS TO START

**TRAIN SET  
WITH OVAL TRACK  
AND REVERSING  
TRANSFORMER  
TO OPERATE  
YOUR TRAIN AND  
ACCESSORIES**

**FOR ENLARGING TRAIN  
SETS 2955 AND 2975 WE  
RECOMMEND THE  
SUPPLEMENTARY  
TRACK SETS 5090  
AND 5091 ON PAGE 42**

**AND FOR THE  
TRAIN SET 2815**

*The train that is made to be played with. Locomotives and cars are easy to put on the track, seldom come off even at high speed. An assortment of model railway equipment to delight both the child and the adult hobbyist. An exciting hobby that grows . . . this catalog shows hundreds of add-on items, the smaller ones are best for the beginning layout. All will be used in the larger model railroad to follow.*

The transformer supplied with these Train Sets has, like all MÄRKLIN model railway transformers of the 6100 and 6500 Groups, connections for supplying current for trains as well as lighting and magnetically-operated accessories. It also supplies high-voltage current for reversing the locomotives. These transformers will also operate larger locomotives, or additional points and signals. If overloaded or temperature should rise too high, the transformer will switch itself off automatically.

**2955** Freight Train with Transformer **M**-Track

With locomotive, 2 freight cars, 8 curved track 5120, 1 straight track 5106, 1 feeder track 5111, and a transformer · Train 13½" long

**2975** Freight Train with Transformer **M**-Track

With 3000 locomotive, 2 freight cars, 12 curved track 5100, 1 straight track 5106, 1 feeder track 5111, and a transformer · Train 12½ in. long

**2815** Freight Train with Transformer **K**-Track

With locomotive 3000, 2 freight cars, 12 curved track 2121, 1 straight track 2100, 1 feeder track 2190, 2 cables, and 1 transformer · Length of train 12½"

**MÄRKLIN**

**HO**

**TRAIN SETS WITHOUT TRANSFORMER**

These train sets supplied in a sturdy gift box, designed to safely store the train, provide the beginning of a model railroad layout. Naturally, there is more fun and enjoyment when your passenger and freight trains can make longer trips, and the cars can be switched in the yards. The track addition sets shown on Pages 42 and 47 show how easy it is to extend your basic set for more enjoyment. The layouts take a minimum of space and can be quickly assembled and taken apart. The track can be stored back in the box when you are through.

The starter train sets shown on pages 2 and 3 contain everything you need to start your layout including the transformer. Only with MÄRKLIN can you find so much pleasure with so small an expense, and this pleasure increases as your track increases. We supply the larger train sets without transformers as they are often bought as gifts to extend the beginners layout, and also because many people prefer to start with the larger transformer which will be necessary for the larger model railroad.

## TANK LOCOMOTIVE

3029 TANK SWITCHER · A model of a six-wheeled 0-6-0 locomotive as used in large industrial concerns · Remote control reversing, and fitted with two special rubber tires to increase pulling power · Dull black plastic with a cast metal frame; coupling hooks both ends · 4 in. long over buffers

**3029**

**\$ 10.95**

## TANK LOCOMOTIVE

**3000**

**\$ 12.95**

3000 TANK LOCOMOTIVE · A model of the six-wheeled 0-6-0 Class 89 engine in use on the German Federal Railways · Reversing by remote control and with increased pulling power by two special rubber tires on the trailing drivers · Three working headlights · Dull black plastic body with cast metal frame · Coupling hooks both ends · 4<sup>3</sup>/<sub>8</sub> in. long over buffers

*The attractive design of these tank engines and the ease of placing them on the track, together with the many purposes they can be used for in both passenger and goods services, and in particular for switching in marshalling yards, have made these tank engines favourites. Their easy running on curves, high performance and harmony in their general appearance are the special advantages of these models.*

## TANK LOCOMOTIVE WITH MÄRKLIN TELEX COUPLERS

**3031**

**\$ 25.50**

### THE MÄRKLIN TELEX COUPLING

*enables the train to be uncoupled from the engine and also coupled up to it again at any desired point on the system, by remote control from the transformer, without any additional apparatus being necessary.*

3031 TANK ENGINE · A model of the eight-wheeled 0-4-0 Class 81 engine on the German Federal Railways · Two rubber tires to increase pulling power; simulated Walschaerts valve motion, and reversing by remote control · Three working headlights at each end · Cast metal frame with all-metal body finished in dull black · MÄRKLIN TELEX COUPLING at both ends · 5 in. long over buffers

The standard Class 24 locomotive was used on the German Federal Railways for passenger and goods services, its maximum speed being 56 miles an hour.

## 3003 MIXED TRAFFIC STEAM LOCOMOTIVE

\$ 19.95

3003 PASSENGER LOCOMOTIVE WITH TENDER · A model of the eight-wheeled 2-6-0 Class 24 engine on the German Federal Railways · Reversing by remote control and with simulated Walschaerts valve motion · The leading truck is kept down on the track by a spring so that there is no risk of derailment · Two special rubber tires to increase pulling power · Three working headlights · Dull black plastic body on pressure-cast zinc frame · Tender close-coupled to the engine, with all details of the six-wheeled riveted construction reproduced · Coupling hook in front with RELEX automatic coupling with the Advance uncoupler on the tender · 8 in. long over buffers

## “BR 74” AN UNUSUAL TANK LOCOMOTIVE BY MÄRKLIN

3095  
\$ 18.95

3095 TANK ENGINE · A model of the German Federal Railways eight-wheeled 2-6-0 Class 74 engine · Fitted with two special rubber tires to increase pulling power and simulated Walschaerts valve motion · Reversing is by remote control; and the leading truck is kept down on to the track by a spring to safeguard against derailment · Three working headlights · Plastic body with pressure-cast zinc frame · Coupling hook in front with Advance uncoupler, RELEX Coupling at rear · 5¼ in. long over buffers

The superheated steam engines first delivered in 1902 as the T 12 locomotive to the Berlin State Railways' Directorate, and subsequently given the Class 74 description when taken over by the then German State Railways (Deutsche Reichsbahn) proved so very successful for suburban passenger services, especially on the Berlin Circle, Metropolitan and suburban lines that there were nearly one thousand of them in service by 1921. After electrification of the Berlin Metropolitan Line they were allotted to numerous centers for use on shortdistance passenger services, as well as on switching work at large stations. Their length over buffers was either 38 ft. 8 in., or 39 ft. 8 in. according to their series. Weighing approximately 70 tons in working order they could reach a speed of 50 miles an hour running either forward or tender first.

Fair Trade prices in US Dollars

The German Federal Railways Class 23 locomotives are used for medium and heavy passenger service and for fast express freight service. Because of the construction of this class of locomotive, they can be operated at speeds of up to 70 mph forward and 55 mph when running tender first. Because of the high speed permitted while running backwards

## MODERN STEAM LOCOMOTIVES

**THE CLASSIC "P 8" LOCOMOTIVE BY MÄRKLIN**

**3098**  
\$ 26.95

The P 8 was built in 1906 by the Schwarzkopff locomotive works of Berlin, and was used by the Prussian State Railways for both local and express passenger service. Although its top speed was only 62 mph, it remained a favorite locomotive in many countries for decades, because of its reliability. All told, 3800 locomotives of this type were built by various makers, and some of them are still in service today.

**HAMO 8398**  
\$ 26.95

The same model as 3098, but for two rail D.C. operation, (also see page 12)

3098 STEAM LOCOMOTIVE WITH TENDER · A model of the German Federal Railways ten wheeler, 4-6-0 Class 038 (38) locomotive · Remote control reversing · Heusinger valve gear · Special springing prevents lead truck from derailing · Two rubber tires on rear drivers to increase the pulling power · Three working headlamps · Flat black all metal body with all boiler and cab details finely reproduced · Die cast metal frame · Eight-wheeled tender with automatic Advance (RELEX) couplers · 9½ in. long over buffers

**FRENCH RAILWAYS STEAM FREIGHT LOCOMOTIVE WITH SMOKE UNIT**

**3046**  
\$ 37.95

**HAMO 8346**  
\$ 37.95

The same model as 3046, but for two rail D.C. operation, (also see page 12)

3046 HEAVY FREIGHT LOCOMOTIVE · A model of the Class 150 X twelve-wheeled 2-10-0 locomotive of the French State Railways (Société Nationale des Chemins de Fer Français, or S.N.C.F.) · Dividing the frame into two groups of driving wheels linked together gives very good running characteristics and enables the engine to take curves well · Simulated Walschaerts valve motion · Remote control reversing · THE ENGINE IS FITTED FOR GIVING OFF VERY REALISTIC ARTIFICIAL SMOKE, the equipment consisting of the smoke unit fitted in the engine, substitute steam pipe, cleaning wire, tweezers and a cartridge of steam fluid (for the 0241 refill cartridge see page 51) · The spring suspension of the leading pony truck ensures safety against derailment · Four special rubber tires on the trailing drivers increase the pulling · Two headlamps · Pressure-cast zinc frame with body finished in dark green · Coupling hook on leading pony truck gives full coupling facilities in front as well · Cab windows are glazed · The eight-wheeled double bogie tender has an automatic coupling with the RELEX Advance uncoupler · 11 in. long over buffers

**3047**  
\$ 41.50

**HEAVY FREIGHT**

*This is one of the most powerful Steam locomotives in freight service on the German Federal Railways. The prototype Series 044 (44) locomotive develops almost 2000 horsepower. This magnificent machine is seen on long distance runs in areas which are not yet electrified. Because of the imposing look of this locomotive we have been very careful in modelling this piece of equipment.*

Fair Trade prices in US Dollars

## STEAM PASSENGER LOCOMOTIVE WITH SMOKE

*This passenger locomotive of Series 001 (01) is among the handsomest and most powerful in service on the German Federal Railways at the present time.*

**3048**

**\$ 33.95**

3048 PASSENGER LOCOMOTIVE · A model of the 4-6-2 Passenger locomotive Class 001 (01) of the German Federal Railways · Remote control reversing · Walschaerts valve gear · LOCOMOTIVE PRODUCES VERY REALISTIC SMOKE, the equipment consisting of the smoke unit, replacement steam pipe, cleaning wire, tweezers and smoke capsule (for refill see 0241 smoke fluid on page 51) · Special springing prevents leading and trailing trucks from derailing · Two special rubber tires on rear drivers to increase pulling power · Three working headlights · Black, all metal body · Die cast metal frame · Two truck tender with automatic Advance coupler (RELEX) · 11 in. long over buffers

## STREAMLINED STEAM LOCOMOTIVE

**New**

**3094**

**\$ 34.95**

*After streamlined fairings had proven themselves in other locomotives because of the reduction of wind resistance at high speeds, the Class 031<sup>0</sup> locomotives were put into service with streamlined bodies in 1937. However, to make the maintenance of the frame easier the drivers were left uncovered. It was developed as a lighter version of the Class 01 locomotive with an original 17 ton per axle load and a top speed of 84 mph.*

3094 STREAMLINED EXPRESS LOCOMOTIVE WITH TENDER · Model of the German Federal Railways Class 031<sup>0</sup> · 4-6-2 Wheel arrangement, Pacific type · Remote control reversing · Heusinger valve gear · Leading and trailing truck are sprung to prevent derailments · Rear drivers have rubber tires to increase pulling power · Two working headlights · Dull black die cast metal body in streamlined shape with silver stripes · Fully detailed cab and boiler backhead features · Windows have frosted glass panes · Die-cast metal underframe · Tender has two 4 wheeled trucks and delayed action automatic couplers (RELEX) · Length over buffers 10 3/4"

Fair Trade prices in US Dollars

## LOCOMOTIVE WITH SMOKE AND MÄRKLIN TELEX-COUPPLERS

3047 HEAVY FREIGHT LOCOMOTIVE · A model of the German Federal Railways Class 044 (44) twelve-wheeled 2-10-0 locomotive, the engine and tender being permanently coupled together · Excellent running characteristics and easy running on curves are obtained by dividing the frame into two different groups of driving wheels · Remote control reversing · Simulated Walschaerts valve motion · THE ENGINE IS FITTED FOR GIVING OFF VERY REALISTIC ARTIFICIAL SMOKE, the equipment comprising the smoke unit fitted in the engine, substitute steam pipe, cleaning wire, tweezers and a cartridge of steam fluid (for the 0241 refill cartridge see page 51) · The spring suspension of the leading pony truck ensures safety against derailment · Four rubber tires to increase the pulling power · Three working headlights · Dull black pressure-cast zinc casing · Coupling hook fixed to leading truck provides full front coupling facilities · Scale model smoke deflector plates · Cab windows glazed with cellon · Pressure-cast zinc frame · Eight-wheeled double-bogie tender fitted with the MÄRKLIN TELEX coupling · 11 in. long over buffers

The MÄRKLIN TELEX coupling fitted in the tender enables the train to be uncoupled at any point on the system, and also coupled up again, by remote control from the transformer without requiring any extra equipment.

**HAMO 8347**

**\$ 41.50**

The same model as 3047, but for two rail, D.C. operation, (also see page 12)

## ELECTRIC SWITCHING LOCOMOTIVE "EA 800"

3044 ELECTRIC LOCOMOTIVE · Model of the Mehrsystem-Industries Type EA 800 industrial locomotive · Six-wheeled with all axles powered · Two rubber tires to increase pulling power · Remote control reversing · Three working headlights on the front · Red plastic body with silver stripes · Single bar pantograph mounted on roof · Clear plastic windows · Metal die cast frame, painted grey, with finely detailed journal boxes · Coupling hooks at both ends · Length 4½" over buffers

**3044**

\$ 17.50

*Locomotive of this type are designed both for road and switching service on industrial lines, and for transferring cars to mainline railroads. They can draw power both from overhead power lines or from internal batteries. Maximum speed is approx. 35 mph. The locomotive with single axle drive develops 39,000 lbs. tractive effort. It weighs 60 tons and measures 32 feet in length.*

## REPLACEMENT PARTS FOR MÄRKLIN \* H0-LOCOMOTIVES SEE PAGE 51

- \* H0-Rubber Tires
- Current Pickup Shoes
- Reverse Unit Springs
- Lubricating Oil
- Pantographs
- Motor Brushes
- Smoke Fluid

**HAMO**  
HAMO Locomotives for two rail D.C. are equipped with permanent magnet motors and can be reversed by changing the polarity of the current. Electric locomotives have headlights on each end that change when you change the direction of the locomotive. These models will run on all tracks complying with NEM standards. A set of interchange couplings is supplied with each locomotive, allowing other makes of rolling stock to be coupled to it.

HAMO-Locomotives are a product MÄRKLIN

## "194" (E 94) HEAVY ELECTRIC

*The 194 (E 94) locomotive is the work-horse of the railroads. They have six traction motors with a total of 6350 horsepower, and a service weight of 120 tons. They have a maximum speed of 56 mph and are used mainly for heavy freight operations. The German Federal Railways have 124 of these impressive looking locomotives now in service.*

**3034**  
\$ 21.50

3034 ELECTRIC LOCOMOTIVE · A model of the German Federal Railways' eight-wheeled 0-4-4-0 (Bo-Bo) Class 141 (E 41) locomotive · Both axles of the trailing bogie are driven and there are four special rubber tires to increase pulling power · Reversing by remote control, three working headlights, front and rear · Selector lever for optional working from either the overhead contact wire or surface contact · Two springloaded pantographs on roof · Blue all-metal body with silver roof and fixed buffer beams · Windows glazed with cellophane · Coupling hooks with the Advance uncoupler both ends · 7 in. long over buffers

**“141” (E 41)  
MULTI-PURPOSE ELECTRIC LOCOMOTIVE**

*The in service weight of the 141 (E 41) locomotive is 66.4 tons and is 50 feet in length. Its four traction motors exert 3100 horse power with a maximum speed of 75 mph. These locomotives are used for both fast passenger and freight service and are seen finished in either blue or green.*

**3037**  
\$ 21.50

3037 ELECTRIC LOCOMOTIVE · A model of the German Federal Railways' Class 141 (E 41) locomotive · Similar to No. 3034 but with green body

**FREIGHT LOCOMOTIVE**

3022 ELECTRIC FREIGHT LOCOMOTIVE · A model of the twelve-wheeled 0-6-6-0 (Co-Co) Class 194 (E 94) locomotive on the German Federal Railways · Three axles are driven and there four special rubber tires to increase the pulling power · Reversing is by remote control, and the model has three working headlights, front and rear · Selector lever for optional working from either the overhead contact wire or surface contact · Two spring-loaded pantographs on roof · Inset windows with plastic frames · Automatic coupling with the RELEX Advance uncoupler at both ends · 8 1/4 in. long over buffers

**3022**  
\$ 35.95

The same model as 3022 but for two rail D.C. operation (also see page 12)

**3937**  
\$ 19.50

**“141” (E 41)  
LOCOMOTIVE KIT**

3937 ELECTRIC LOCOMOTIVE KIT · This kit contains every thing necessary to build Model 3037 locomotive, except the light bulbs which must be purchased separately · The only tools needed are a screw driver and a pair of pliers · No soldering or painting is necessary · Complete illustrated instructions are included with the kit · The locomotive kits are more difficult than the car kits

**“110” (E 10) ELECTRIC EXPRESS LOCOMOTIVE**

**3039** \$ 26.95

**3039 ELECTRIC EXPRESS LOCOMOTIVE** · A model of the two 4 wheeled truck 110 (E 10) locomotive of the German Federal Railways · Four wheel drive with rubber tires to increase the pulling power · Remote control reversing · Three working headlights at each end · Selector lever to pickup current from the overhead wires or track stud contacts · Blue, all metal body with solid buffers · Scale reproduction of all roof details, with two scale pantographs · Windows inset in plastic frames · Automatic Advance coupler at each end · 7<sup>1</sup>/<sub>8</sub> in. long over buffers

The Series E 10 and E 40 electric locomotives (which are now designated as 110 and 140 for use with the German Federal Railways new computers) were purchased in 1956. In outward appearance the only difference is the color, but their duties and power are entirely different. The 110 (E 10) is used as a passenger locomotive with a maximum speed of 90 mph, while the 140 (E 40) is used for freight service with a top speed of 60 mph. Both locomotives, however have a horsepower rating of 5000 and transmit their power to the axles through a standard differential, but different transmission. These locomotives measure almost 50 feet in length and when ready for service have a weight of 85 tons. In addition to use in Germany, several of the 140 (E 40) locomotives were loaned temporarily to Switzerland, where they gave excellent service.

**“140” (E 40) FREIGHT LOCOMOTIVE OF THE GERMAN FEDERAL RAILWAYS**

**3040** \$ 26.95

**3040 ELECTRIC FREIGHT LOCOMOTIVE** · A model of the two 4 wheeled truck 140 (E 40) locomotive of the German Federal Railways · Four wheel drive with rubber tires to increase the pulling power · Remote control reversing · Three working headlights at each end · Selector lever to pickup current from the overhead wires or track stud contacts · Green, all metal body with solid buffers · Scale reproduction of all roof details, with two scale pantographs · Finely finished lettering · Windows inset in plastic frames · Automatic Advance coupler at each end · 7<sup>1</sup>/<sub>8</sub> in. long over buffers

**THE “103” (E 03) – THE FASTEST, MOST POWERFUL LOCOMOTIVE ON THE GERMAN**

Unmistakable by their modern aero-dynamic design, these are the fastest and most power locomotives in service in Germany. Six traction motors, one for each axle, produce 9000 horsepower and a rated speed of 125 mph but in service actually reach higher speeds. They are 62 feet in length with a weight of 112 tons. All the splendid features of the original are captured in this exquisite MÄRKLIN model.

## ITALIAN ELECTRIC LOCOMOTIVE

**3035** \$ 21.50

3035 ELECTRIC LOCOMOTIVE · A model of the Italian State Railways' eight-wheeled 0-4-4-0 (Bo-Bo) Class E 424 locomotive · Two axles are driven with four rubber tires to increase the pulling power · Reversing by remote control · Two working headlights front and rear · Selector lever for optional working from either the overhead contact wire or surface contact · Two spring-loaded pantographs on roof; all-metal casing with fixed buffer beams and windows glazed with cellophane · Coupling hooks with the Advance uncoupler both ends · 6<sup>7</sup>/<sub>8</sub> in. long over buffers

*Fair Trade prices in US Dollars*

## AUSTRIAN ELECTRIC LOCOMOTIVE

3036 ELECTRIC LOCOMOTIVE · A model of the Austrian State Railways' eight-wheeled 0-4-4-0 (Bo-Bo) Class 1141 locomotive with four rubber tires to increase the pulling power · Remote control reversing · Two working headlights front and rear · Selector lever for optional working from either the overhead contact wire or surface contact · Two spring-loaded pantographs on roof · All-metal casing with fixed buffer beams · Windows glazed with cellophane · Coupling hooks with the Advance uncoupler both ends · 6<sup>7</sup>/<sub>8</sub> in. long over buffers

**3036** \$ 21.50

**HAMO**

**8336**  
\$ 21.50

The same model as 3036, but for two rail D.C. operation (also see page 12)

*The full-sized original of this MÄRKLIN Model is in service on the Austrian Federal Railways chiefly on routes where conditions are favorable as regards gradients and directions. These locomotives weigh 80 tons each and have a one-hour rating of 3400 H.P., their maximum speed being about 70 miles an hour.*

## FEDERAL RAILWAYS

**3053** \$ 31.95

3053 ELECTRIC PASSENGER LOCOMOTIVE · A model of the twelve-wheeled Class 103 (E 03) locomotive of the German Federal Railways · Six wheel drive with four rubber tires to increase the pulling power · Remote control reversing · Three working headlight at each end · Working roof lights as on the prototype · Selector lever for picking up current from the overhead wires or from the track stud contacts · The locomotive frame, which extends to the silver stripe above the lower headlights is made of die cast metal · Special low center of gravity · Plastic body finished in the correct colors of the TEE (Trans European Express), red and beige · Plastic windows inset in frames · Two working pantographs on roof · Coupling hooks at each end · 8<sup>1</sup>/<sub>2</sub>" over buffers

SWISS HEAVY FREIGHT ELECTRIC LOCOMOTIVE —  
“CROCODILE”

*This giant 16 wheeled electric Swiss locomotive Be 6/8, nicknamed “The Crocodile”, is the real “King of the Mountains”. It is undoubtedly the most impressive locomotive of the Swiss Railways. It is with particular pleasure that we have modeled this prototype with the greatest care in H0 scale.*

**3015** \$ 59.95

3015 ELECTRIC FREIGHT LOCOMOTIVE—the “ Crocodile” · A model of the sixteen-wheeled 2-6-6-2 Swiss locomotive · This articulated locomotive is able to negotiate the regular curves with ease · Remote control reversing · Two rubber tires to increase the pulling power · Three working headlights that change code as the locomotive changes direction · Selector lever for picking up current from the overhead wires or the track stud contacts · Two working pantographs on the roof · Green, all metal body · Frosted glass windows · Automatic Advance couplers (RELEX) at each end · 10 1/4” long over buffers

**3050** \$ 29.95

THE SWISS FEDERAL RAILWAYS’  
POWERFUL MULTI-PURPOSE LOCOMOTIVE

3050 ELECTRIC ALL PURPOSE LOCOMOTIVE · A model of the twelve-wheeled Series Ae 6/6 locomotive of the Swiss Federal Railways · Six wheel drive with four special rubber tires to increase the pulling power · Remote control reversing · Three working headlights at each end · Selector lever for picking up power from the overhead wires from the tracks stud contacts · Two working pantographs on the silver roof · Green die cast metal body with solid buffers · Scale details of the locomotive of the “Bern Kanton” · Frosted glass windows · Coupler hooks at each end · 7 7/8” long over buffers · Crests of the other Swiss Cantons are supplied with this locomotive

*The Swiss Railways ordered the Ae 6/6 for international passenger runs and for fast freight service. The locomotives weight of 120 tons with 6000 horsepower in its six motors, give it an enormous starting effort and climbing power. Maximum speed is 80 miles per hour. With all its giant power, it still has a particularly handsome appearance, and this was sufficient reason for us to model it most accurately.*

FRENCH ELECTRIC LOCOMOTIVE

The prototype of our model is used for both freight and passenger service on the French National Railways. Its four motors develop an total of 5500 hp and gives the locomotive a maximum speed of 100 mph.

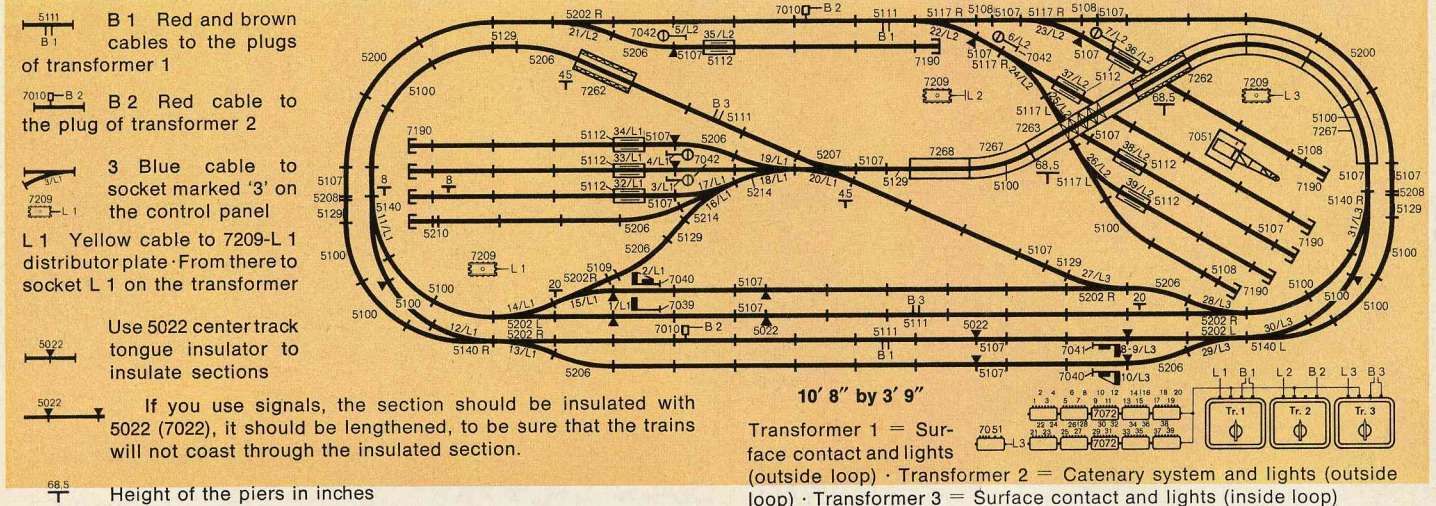

3038 \$ 23.50

3038 ELECTRIC LOCOMOTIVE · A model of the eight-wheeled Class BB 9200 locomotive of the French Railways (Société Nationale des Chemins de Fer Français, or S.N.C.F.) for four wheel drive with four rubber tires to increase the pulling power · Remote control reversing · Two working headlights front and rear · Selector lever for picking up power from the overhead wires or from the track stud contacts · Two working pantographs on the roof · Turquoise all metal body, with glazed plastic windows · Automatic couplers at each end · 7 in. long over buffers

TRACK PLAN

FOR MÄRKLIN HO LAYOUT ON PAGES 6, 7, 19, 24, 26, 28, 34, 38, 55 AND ON THE BACK COVER

“LE CAPITOLE” OF THE FRENCH RAILWAYS

3059 ELECTRIC LOCOMOTIVE · A model of the S.N.C.F. eight-wheeled 0-4-4-0 (Bo-Bo) Class BB 9200 · Two axles are driven and four rubber tires to increase pulling power · Reversing is by remote control · Two working headlights, front and rear, and a selector lever is fitted for optional working from either the overhead contact wire or surface contact, with two single arm pantographs · Red all-metal body with windows glazed with cello · Coupling hooks with the Advance uncoupler at both ends · 7 in. long over buffers

3059 \$ 25.50

HAMO 8359 The same model as 3059, but for two, D.C. operation, (also \$ 25.50 see page 12)

The Class 9200 locomotive used for hauling the French high-speed train “Le Capitole”, has a different gear ratio to the same locomotive of the standard series, and so can attain a higher speed. A train weighing 400 tons can be hauled by this locomotive at a speed of approximately 124 miles an hour.

## SWEDISH ELECTRIC LOCOMOTIVE

**3030**

\$ 23.95

3030 ELECTRIC LOCOMOTIVE for all service · A model of the Swedish State Railways Class Da locomotive · 2-6-2 wheel arrangement driven by geared jackshaft · Special springing prevents leading and trailing trucks from derailing · Two rubber tires on the drivers for increased pulling power · Three working headlights on each end · Selector lever for current pickup from the overhead contact wires or the track stud contacts · Two scale pantographs on the roof · Brown all metal body with solid buffers · Die cast metal frame · Automatic Advance couplers (RELEX) at each end · 5<sup>7</sup>/<sub>8</sub>" long over buffers

*The Da type locomotive is used by the Swedish Railways (Statens Jarnvagar) for both freight and passenger service. Because these locomotives have only one motor and are relatively light, 15 tons, they are equipped with side rods driven from a jackshaft. This prevents slipping of individual wheels when the locomotive is starting.*

## SWEDISH FREIGHT AND PASSENGER LOCOMOTIVE

**3043**

\$ 27.50

3043 MIXED TRAFFIC ELECTRIC LOCOMOTIVE · A model of the eight-wheeled Class Rc Locomotive of the Swedish State Railways (Statens Jarnvagar) · Four wheel drive with four rubber tires to increase the pulling power · Remote control reversing · Four working headlights at each end · Selector lever for picking up power from the overhead wires or track stud contacts · Orange plastic body with glazed windows inset in frames · Two spring loaded pantographs on roof · Die cast metal frame · Coupler hooks at each end · 6<sup>7</sup>/<sub>8</sub> in. long over buffers

*The Swedish State Railways plan to have 60 of these locomotives in service. The A.C. power taken from the overhead wires on the prototype, is converted to D.C. in the locomotive to provide power for the four traction motors, delivering a total of 5000 hp. These locomotives weighing 76 tons, attain a top speed of 84 mph. The total length over the buffers is 51 ft. 9 in.*

Fair Trade prices in US Dollars

## NETHERLAND RAILWAYS ELECTRIC LOCOMOTIVE

**3051**

\$ 28.95

3051 ELECTRIC LOCOMOTIVE · A model of the twelve-wheeled 0-6-6-0 (Co-Co) 1200 Series locomotive on the Netherlands Railways (Nederlandse Spoorwegen, or N.S.) · Three axles are driven and four rubber tires to increase the pulling power · Reversing is by remote control · Three working headlights, front and rear · Selector lever for optional working from either the overhead contact wire or surface contact · Blue all-metal body with fixed buffer beams and two spring-loaded pantograph on silver roof · Inset windows with plastic frames · Coupling hooks at both ends · 7<sup>3</sup>/<sub>4</sub> in. long over buffers

*The Netherlands Railways ordered altogether 25 of these 1200 Series locomotive built to American design for heavy mixed traffic. At a speed of approximately 45 miles an hour the six traction motors develop a total of 3000 H.P. The maximum speed is 84<sup>1</sup>/<sub>2</sub> miles an hour and the locomotives are 59 ft. long. This locomotive with a few modifications, was also used by the New Haven Railway in the United States.*

**THE "DHG 500" DIESEL-HYDRAULIC LOCOMOTIVE****3078****\$ 13.95**

3078 DIESEL LOCOMOTIVE · A model of a six-wheeled 0-6-0 (C) Works locomotive known as the DHG 500 type · All axles are driven, with two special rubber tires to increase pulling power · Remote control reversing · Three working headlights, front and rear · Blue plastic body with two silver decorative bands · Window openings backed with cellophane · Die cast metal frame · Side frames with scale reproductions of the axle boxes · Strong coupling hooks at both ends · 4<sup>2</sup>/<sub>5</sub> in. long over buffers

*The prototype of these small diesel locomotives with hydraulic transmissions are approximately 40 feet long and yet pack many hundred horsepower under the hood. The locomotives are equipped with heavy duty transmissions which allow them to be used for long periods of time without service. These industrial locomotives (MÄRKLIN models 3078, 3080) are designed with windows at the bottom of the engineers cab which allows direct vision to the buffers for accurate switching.*

**INDUSTRIAL LOCOMOTIVE****3080****\$ 11.95**

3080 DIESEL LOCOMOTIVE · A model of a six-wheeled 0-6-0 (C) Works locomotive · All axles are driven and there are two special rubber tires to increase pulling power · Remote control reversing · Yellow plastic body with two dark decorative bands; pressure-cast frame · Strong coupling hooks at both ends · 4<sup>2</sup>/<sub>5</sub> in. long over buffers

*Fair Trade prices in US Dollars*

**TELEX** see page 8**"260" (V 60) DIESEL HYDRAULIC SWITCHING LOCOMOTIVE WITH MÄRKLIN-TELEX-COUPPLERS****3065****\$ 23.50**

3065 DIESEL LOCOMOTIVE · A model of the six-wheeled 0-6-0 (C) Class 260 (V 60) locomotive on the German Federal Railways · The three axles are driven and reversing is by remote control · Two special rubber tires to increase the pulling power · Three working headlights, front and rear, exactly the same as on the full-sized original · Red plastic body with numerous details and inset windows with plastic frames · Die cast metal frame · MÄRKLIN TELEX COUPLING at both ends · 4<sup>3</sup>/<sub>4</sub> in. long over buffers

**WITH STANDARD COUPLERS****3064** **\$ 18.95**

3064 DIESEL LOCOMOTIVE · A model of the German Federal Railways Class 260 (V 60) · SIMILAR TO THE 3065 BUT WITH ADVANCE COUPLERS AT EACH END, NOT TELEX COUPLERS

## DIESEL HYDRAULIC LOCOMOTIVE "212" (V 100)

3072 DIESEL LOCOMOTIVE · A model of the eight-wheeled truck (BB) Class 212 (V 100) diesel of the German Federal Railways · Four wheel drive with rubber tires to increase the pulling power · Remote control reversing · Three working head-lights at each end · Die cast metal underframe with solid buffers · Red plastic body with fine details, scale handrails · Windows inset in plastic frames · Automatic couplers (RELEX) at each end · 5 1/2 in. long over buffers

The front and rear cabs of the 3072 could be kept narrow as on the prototype due to a specially designed motor and gear arrangement.

**3072**  
\$ 23.50

*The 212 (V 100) is a multi purpose diesel a full 40 feet long and weighing 63,2 tons. The new types have 1350 horse power, which is transmitted hydraulically through universal drive shafts to all four axles. In order to use the locomotive for both freight and passenger service a special dual ratio transmission is provided, that can be operated from the cab. In the low ratio the locomotive has maximum power but a fairly low speed 44 mph, while in high ratio is reaches speeds of 65 mph.*

## DIESEL LOCOMOTIVE "216" (V 160)

3075 DIESEL LOCOMOTIVE · A model of the eight-wheeled 0-4-4-0 Class 216 (V 160) of the German Federal Railways · Four wheel drive with rubber tires to increase the pulling power · Remote control reversing · Three working headlights at each end · Red and grey plastic body with scale details, grey roof · Windows inset in plastic frames with simulated windshield wipers · Die cast metal frame with solid buffers · Automatic Advance couplers (RELEX) at each end · 7 in. long over buffers

**3075**  
\$ 21.50

**HAMO** **8375** The same model as 3075, but for operation on two rail, D.C.  
\$ 21.50 (see also page 12)

*The 216 (V 160) locomotive designed for medium mainline service, develops 1900 horse power giving it a maximum speed of 75 mph. It is 52 feet long and weighs 79 tons fully serviced.*

## DIESEL HYDRAULIC EXPRESS LOCOMOTIVE "220" (V 200)

3021 DIESEL LOCOMOTIVE · A model of the German Federal Railways 220 (V 200) locomotive with two 4 wheel trucks (BB) · Four wheel drive with rubbers tires to increase the pulling power · Remote control reversing · Three working headlights at each end · Red and grey all metal body with solid buffers and grey roof · Frosted glass windows · Automatic advance couplers at each end · 8 1/4 in. long over buffers

**ALSO IN  
KIT FORM**

**3021**  
\$ 22.95

**3921**  
\$ 18.50

3921 DIESEL LOCOMOTIVE CONSTRUCTION KIT · Containing all component parts required for building the 3021 diesel locomotive, except lamp bulbs (though the locomotive can be lit up) · Requires only a screwdriver and a pair of pliers for assembling, there being no painting or soldering to be done · Assembling this locomotive is rather more difficult than building coaches or wagons · Illustrated instructions are supplied with every Construction Kit

## BRITISH "WARSHIP CLASS" DIESEL LOCOMOTIVE

**3073** 3073 DIESEL LOCOMOTIVE · A model of British Rail's (BR) eight-wheeled 0-4-4-0 (BB) "Warship" Class locomotive · Both axles of one bogie are driven and four special rubber tires to increase pulling power · Remote control reversing · Two working headlights front and rear · Plastic body with fine details · Pressure-cast zinc bearers with fixed buffer beams forming the underpart for improving the centre of gravity · Dark green body and bearers with grey roof · Windows glazed with cellon · Coupling hooks with the Advance uncoupler at both ends · 8<sup>3</sup>/<sub>10</sub> in. long over buffers

\$ 21.50

The "Warship" Class locomotives were built in British Rail's Swindon Works in 1958 to the design of the German 220 (V 200) locomotive. All locomotives of this type bear names such as "Formidable", "Albion", "Majestic" and so on. Transmission is hydraulic, and the power developed is 2200 H.P.

## BELGIAN RAILWAYS DIESEL LOCOMOTIVE

**3066** 3066 DIESEL LOCOMOTIVE · A model of the Belgian State Railways (SNCB) twelve-wheeled 0-6-6-0 (Co-Co) Type 204 locomotive · Three axles are driven and four rubber tires to increase the pulling power · Remote control reversing · Three headlamps to light up, front and rear · Green pressure-cast zinc body with black roof, fixed buffer beams and inset windows with plastic frames · Coupling hooks at both ends · 8 in. long over buffers

\$ 24.95

The Belgian Type 204 locomotives are also engaged in hauling light goods trains as well as passenger and express trains in traffic crossing the frontier into Germany. They have diesel-electric drive and develop a total of 1750 H.P. giving them a maximum speed of about 87½ miles an hour.

## DANISH RAILWAYS DIESEL-ELECTRIC LOCOMOTIVE

**3067** 3067 DIESEL LOCOMOTIVE · A model of the twelve-wheeled 0-6-6-0 (Ao 1 Ao) (Ao 1 Ao) Type My 1100 Statsbaner (D.S.B.) · Three axles are driven and there are four special rubber tires to increase the pulling power · Remote control reversing · Three working headlights, front and rear · Red-brown pressure cast zinc body with grey roof and fixed buffer beams · Inset windows with plastic frames · Coupling hooks at each end · 8 in. long

\$ 24.95

The My 1100 Type diesel-electric multi-purpose locomotives on the Danish State Railways (DSB) are very similar to the Belgian Type 204. Among other services they haul the international expresses over the direct "Vogelflug" connection (the line "as the crow flies").

## NORWEGIAN RAILWAYS DIESEL ELECTRIC LOCOMOTIVE

3068 DIESEL LOCOMOTIVE · A model of the Norwegian State Railways' (Norske Statsbaner, or N. S. B.), twelve-wheeled 0-6-6-0 (Co-Co) Type Di 3 locomotive · Three axles are driven and there are four rubber tires to increase the pulling power · Fitted with reversing gear · Three working headlights front and rear · Redbrown all-metal body with silver roof and roof fittings · Fixed buffer beams, inset windows with plastic frames · Coupling hooks at both ends · 8 in. long over buffers

**3068**

\$ 25.95

*Diesel locomotives are being used in increasing numbers on the Norwegian State Railways' lines in mountainous regions that are not yet electrified. The diesel engine of the Type Di 3 develops 1900 H.P. with which the locomotive can reach a maximum speed of some 62½ miles an hour. In general design this locomotive resembles the Belgian Type 204 and also the Danish Type My 1100 locomotives, but has more detail.*

## AMERICAN "F 7" DIESEL LOCOMOTIVE OF THE UNION PACIFIC RAILROAD

3061 DIESEL LOCOMOTIVE · A model of the American EMD F 7 eight-wheeled locomotive built by the Electro-Motive Division of General Motors for the Union Pacific Railroad · Remote control reversing · Two axles are powered and four wheels are fitted with special rubber tires to increase the pulling power · Working headlights · All metal body with clear plastic windows · Front and rear couplers with Advance coupler at the front and RELEX Advance uncoupler at the rear · 6⅞ in long

**3061**

\$ 19.95

4061 LOCOMOTIVE WITHOUT POWER to match the 3061 Union Pacific locomotive · Eight-wheeled · Working headlights · All metal body with clear plastic windows · Equipped with the Advance coupler on the front · 6⅞ in. long

\$ 11.50 **4061**

## AMERICAN "F 7" DIESEL LOCOMOTIVE OF THE SANTA FE RAILWAY

3060 DIESEL LOCOMOTIVE · A model of the American Type F 7 eight-wheeled 0-4-4-0 (Bo-Bo) locomotive built by the Electro-Motive Division of General Motors for the Atchison, Topeka and Santa Fé Railroad · Remote control reversing · Two axles are driven and there are four rubber tires to increase pulling power · Working headlights, scale model lighting · All-metal body windows glazed with cello · Coupling hook with the Advance uncoupler at driver's cab end, and automatic coupling with the RELEX Advance coupler at the trailing end · 6⅞ in. long

**3060**

\$ 19.95

4060 DIESEL LOCOMOTIVE WITHOUT POWER, to match the 3060 Santa Fé locomotive · Eight-wheeled · Working headlights · All metal body with clear plastic windows · Equipped with Advance coupler on the front · 6⅞ in. long

**4060**

\$ 11.50

**TWO UNIT ELECTRIC RAILTRAIN**

3076 TWO UNIT RAILTRAIN · A model of the battery powered multiple unit train Class 515/815 (ETA 150 + ESA 150) of the German Federal Railways

Rail Motor Car: 8 wheeled with four wheels driven · All driving wheels equipped with rubber tires to increase pulling power · Reversing by remote control · Red plastic body · Interior fittings with lighting system · Plastic windows inset in frames · Silver roof

Trailer Car: 8 wheeled · Connected to the Motor Car by a permanent coupling · Red plastic body · With complete interior, seating arrangement, 2 seats on each side of center aisle · Interior lighting system · Plastic windows inset in frames · Silver roof

Both units equipped with three headlights that show white when running forward and automatically change to two red lights when reversed · Coupler hooks at each end · Length of train over buffers 19 1/2"

The same model as 3076, but for two rail, DC operation (also see page 12)

**HAMO 8376**  
\$ 39.95

The Motor Railcar Class 515 (ETA 150) – usually coupled to Trailer Car 815 (ESA 150) – are used on both branch-line railway divisions and on main divisions in express

**3070**  
\$ 59.95

**“TEE” THREE UNIT TRAIN**

The TEE Train illustrated consists of the 3070 three car set plus the 4070 First Class Coach making the normal four car train. The length of the complete train is 37 in.

**4070** \$ 13.95

3070 THE TEE THREE-CAR MULTIPLE-UNIT TRAIN · A model of the Netherlands-Swiss Trans-Europa Express Train, consisting of a driving car, a composite First Class, and restaurant car, and a car with a spacious saloon-type First Class compartment, together with a control cabin for the driver · The model train is 27 1/2 in. long

The twelve-wheeled driving car has three axles driven with four rubber tires to increase pulling power · Reversing is by remote control · Dull black pressure-cast zinc underframe with reproduction of the drivers seats · Plastic body with plastic-framed inset windows

The Restaurant and control cars are each eight-wheeled with two bogies exactly as the full-sized originals · Plastic bodywork with interior lighting giving an excellent illuminated effect by light distributors · Plastic-framed inset windows · The three units are coupled together by special very close couplings, with very closely-covered connections between the cars · The driving and control cars carry white three lamp working headlights and also two red tail lights, all switching over automatically when the train reverses its running direction · One current collector each on the driving and control cars, the front one in the direction of travel picking up the traction current in each case · A pair of tweezers is included in the box for the set

## RAILBUS AND TRAILER

3016 RAILBUS · A model of the German Federal Railways 795 (VT 95) unit · Four-wheeled, with one axle driven and rubber tires to increase pulling power · Remote control reversing · Working headlights at both ends, with interior lighting by two bulbs · Red plastic body with cast metal frame and windows glazed with cellon · Special couplings at both ends for close-coupling the cars together · 5<sup>7</sup>/<sub>8</sub> in. long over buffers

**3016**

\$ 15.95

**4018**

\$ 5.95

4018 RAILBUS TRAILER · A model of the German Federal Railways' 995 (VB 142) unit · Four-wheeled, with plastic body and windows with cellon glazing · Red tail lights at both ends and one bulb for interior lighting · Pickup shoe for lighting current · Special coupling to fit railbus only · 4<sup>3</sup>/<sub>4</sub> in. long over buffers

**3076**

\$ 39.95

and passenger service. The range of operation is limited to about 200 miles because of the performance of the storage batteries carried as the power source. Two motors with an hourly output of 270 hp enable the train to reach a top speed of 60 mph. The Motor Car and the trailer each measure 46 ft in length, with the Motor car weighing 56 tons and the Trailer weighing 23 tons.

## TRANS EUROP EXPRESS

Five complete trains of the Netherlands-Swiss TRANS-EUROPEAN-EXPRESS are now in service. The locomotive has three diesel engines with a total of 2300 hp giving the train a top speed of 87<sup>1</sup>/<sub>2</sub> miles per hour. The windows do not open in the cars, due to the high speed and the air conditioning system. As in all TEE trains, there are only first class cars, each with 144 seats. The dining car has room for 32 diners.

4070 TEE FIRST CLASS COMPARTMENT COACH · Eight-wheeled, with two bogies exactly as on the original car · Plastic body with interior lighting consisting of light distributing bars and two bulbs giving excellent illumination · Windows inset in individual plastic frames · Movable diaphragms at each end of car · Special couplers to connect with the TEE train only · 9 in. long

## TEE-COACHES WITH FULL SCALE INTERIORS

### EXCLUSIVE AND WELL-DESIGNED

We offer here, the stars of the German Federal Railways, the TEE cars for operation with electric locomotives (different from the diesel TEE train on page 24). These are the best equipped, most comfortable and undoubtedly the most beautiful equipment on the German Federal Railways. We have retained all these fine features in the models (the design of the cars is the same as the express coaches on pages 30/31).

**4090 TEE DOME CAR · First Class ·** A model of the German Federal Railways eight-wheeled Type ADm coach · Body painted red and beige with grey fairings · Removable silver roof · Frosted glass windows inset in frames · Car has complete interior · Vista-dome compartment · 9½" long · Interior can be lighted using lighting equipment 7322 (page 54)

**4085 TEE COMPARTMENT COACH · First Class ·** A model of the German Federal Railway's Type Avm eight-wheeled coach · The body is finished beige and red with dark-grey fairing and detachable silver-coloured roof · Inset plastic-framed windows · The coach has the interior equipment already fitted, with a side corridor · 9½ in. long · For lighting by interior lighting set 7320 (page 54)

**4089**  
\$ 7.95

**4089 TEE COMPARTMENT COACH · First Class ·** As No. 4085 coach, but fitted with current pickup, fittings for interior lighting and tail lights

**4086 TEE CHAIR CAR · First Class ·** A model of the German Federal Railway's eight-wheeled Apm type coach · Body finished beige and red, with dark grey fairing and detachable silver-coloured roof · Inset plastic-framed windows · The interior equipment is already fitted with centre corridor and the 1-2 seating arrangement · 9½ in. long · For lighting by interior lighting set 7320 (page 54)

**4087 TEE RESTAURANT CAR · A model of the German Federal Railway's eight-wheeled Type WRm car ·** Body finished beige and red with dark grey fairing, detachable silver-coloured roof and plastic-framed inset windows · Interior equipment is fitted, divided up into the kitchen and restaurant compartments · 9½ in. long · To light up by interior lighting set 7320 (page 54)

**4088 TEE BAR CAR · A model of the German Federal Railways' Type ARDm eight-wheeled car ·** Body finished beige and red with dark grey fairing and detachable silver-coloured roof · Inset plastic-framed windows · Interior equipment is fitted, divided up into the bar, passenger and train crew's compartments · 9½ in. long · To light up by interior lighting set 7320 (page 54)

**0224**  
**\$ 3.75**

**0226**  
**\$ 1.50**

SET OF INTERIOR EQUIPMENT for the 4024 Restaurant Car with ten seated diners, hand painted, red seats and white tables

SET OF 10 SEATED PASSENGERS, pre-painted for completing the 0225 interior equipment set

Our express passenger cars have all metal or plastic bodies. Plastic window panes and frames are inset separately. All door markings, details and scale lettering are true to the prototype, giving you a car that is as close to the original as possible. The cars are finished with a mat finish for an appropriate look. The cars are designed for interior lighting. The Minden-Deutz design bogies have movable side frames which compensate for any unevenness in the track allowing the cars to run smoothly without derailments. The cars have simulated rubber diaphragms at each end, and are equipped with automatic Advance couplers (RELEX).

**4026** 4026 EXPRESS LUGGAGE VAN · A model of the German Federal Railways' D 4 ym type eight-wheeled van · Dark green body with detachable silver roof, shaded grey, inset plastic-framed windows, ivory lettering · 9½ in. long over buffers

4617 DEPRESSED CENTER FLAT CAR · Twelve-wheeled · Loaded with removable transformer · Black · Silver transformer · 10 in. long

## WITH AUTOMATIC COUPLING AND UNCOUPLING (RELEX)

The model freight cars are extremely reliable operating. They include many more details than our regular cars. A most important feature is the RELEX coupler which allows delayed action uncoupling. After the coupler is open with the uncoupler track, they remain open so that you may spot the cars farther down the track without the cars recoupling. All cars without the RELEX couplers will still coupler with cars equipped with RELEX couplers.

**4619** \$ 3.50

**4619 GONDOLA WITH SLIDING ROOF** · A model of the German Federal Railways Type Kmmks 51 · Four-wheeled · The two roof halves slide over each other · Brown body · Silver roof · 4 1/2 in. long

## MÄRKLIN-M-TRACK (M = METAL)

One reason for the success of MÄRKLIN in model railroading is the simplicity, durability and versatility of the track. Our proven metal track features the most reliable current distribution system ever devised. Stud contacts project from the center of the ties. Current is picked up by the sliding current collector on the underside of the locomotive. — Accurately formed black rails are securely mounted on a sturdy metal roadbed, finished to resemble rock ballast. Rail-end joiners push together and pull apart easily for repeated use. — Center stud contact tongues lock together for excellent electrical contact, at the same time as the railjoiners go together. This not only assures a most reliable electrical connection, typical of the MÄRKLIN system, but in addition helps to hold the track sections together tightly. — Three track ovals are available, with varying diameters. The smallest oval, for branches and industrial sidings, consists of 8 sections of 5120, measuring 24" in diameter. — The medium oval, consisting of 12 sections of 5100, measures 30" in diameter. All of the related track items, turnouts, crossings, as well as the straight sections belong to the series with numbers beginning with 51. — The outer oval with 12 sections of 5200, is 36" in diameter. The track sections, turnouts, crossings, etc. that belong to this series begin with the number 52 (see comparisons on page 42).

The screws needed for mounting the track when using 7171 sound deadening strips (see page 46) are included in the package. When not using the sound deadening strips we recommend using flat head screws No. 60 127.

## FOR A TROUBLE FREE LAYOUT

Fig. 1

A special feature of the MÄRKLIN track is the EXCELLENT CURRENT FEEDING QUALITIES. Even when the rail joiners are bent, as is likely to happen after much use, there is no problem of the current being fed as the other rail joiner will still carry the electrical current. No soldering is ever needed to connect your railroad (Fig. 1).

Fig. 2

It is easy to insulate one section of track from another. Simply slip a 5022 insulator piece (see page 45), or any piece of paper, between the center track tongues. NO SPECIAL SECTION OF TRACK IS NEEDED (Fig. 2).

### Curve Track Sections 5100 for standard curve

12 5100 Track Sections make a circle with a 30" outside diameter.

**5100**

Full length = 30" \$ .40

**5101**

Half length = 15" \$ .35

**5102**

1/4 length = 7° 30' \$ .35

### Feeder Track

**5103**

curved Full length = 30" 2 connecting cables \$ 1.00

### Contact Track Sections

Like the other track contact sections, these are used to operate automatically the impulse operated accessories such as turnouts, points, and signals. A small cam located in the center of the roadbed is actuated by the pickup shoe on locomotives and cars. There are two connecting sockets, one which is operated in each direction of travel of the train, so that you can have two different functions on each contact track section.

Contact track section

**5147**

curved Half length = 15" \$ 1.00

### Contact track

**5104**

Full length = 30" curved \$ 1.00

These track sections are used to operate, by remote control, the impulse operated accessories such as turnouts, points and signals. Contact is made by the wheels of the train regardless of the direction of travel. In use for automatic train control, one track is needed to turn the signal green, one to turn it red.

### Interference suppressor track

Curved · Full length = 30" · For preventing interference in radio reception in the intermediate and long wave radio bands

**5130**

\$ 1.50

### Track with small radius

**5120**

\$ .45

for branch lines and industrial trackage

CURVED TRACK SECTION · Full length = 45" · Branch lines and industrial sidings with small radius curves can be built using this track · 8 sections form a complete 24 inch diameter circle · Large locomotives such as 3047 and the express passenger coaches will negotiate this radius, however if you have reverse curves at least on full length section should be placed between the curve · The 5120 track sections can be used with the 5100 and 5200 sections so that a great variety of layouts can be designed

### Straight Track Sections

**5106**

\$ .40 Full length = 7"

**5107**

\$ .35 Half length = 3 1/2"

**5129**

Make up section = 2 3/4" \$ .35

**5108**

\$ .35 1/4 length = 1 3/4"

**5109**

\$ .35 3/16 length = 1 5/16"

**5110**

\$ .35 1/8 length = 7/8"

### Straight Feeder Track

\$ .30

**5211**

\$ 1.50

CROSSING · Length 7 3/5" = 30" · The center studs of the two crossing tracks are insulated electrically from each other

CROSSING · Frog angle 48 1/2° · 3 7/8" long · The center studs of the crossing tracks are insulated electrically from each other

## HOW THE DIFFERENT MÄRKLIN TRACK CIRCLES COMPARE

This drawing shows the various MÄRKLIN track ovals with their radius dimensions, track intervals and angles, and also the number of sections required for full or partial circles.

- 1 circle of 5200 = 12 sections
- 1 circle of 5100 = 12 sections
- 1 circle of 5120 = 8 sections

Track sections of the 5200 Series are for extending an existing system already made up of 5100 Series track. They enable concentric circles to be laid with a track center spacing of 3", and thus provide a safe operating distance between the two tracks of 1½". The 5202 turnouts are used to cross from the inner to the outer loop. The construction of the 5200 track is the same as the 5100 M-Track.

Fair Trade prices in US Dollars

## REMOTE CONTROL AUTOMATIC UNCOUPLING

5113 UNCOUPLER LIGHT STANDARD · Die cast metal · The light on the top of the standard lights up when the uncoupler track is energized · 3¾" high

**5113**  
\$ 1.50

**5112**  
\$ 2.50

5112 UNCOUPLING TRACK SECTION · For releasing the automatic couplers on cars and locomotives · Ramps raise on either side of the center track studs, operated electrically by remote control from the control panel or manually by the lever on the side of the roadbed · Two connecting cables · Length 3½" long

Raising the track ramp releases the couplers.

The RELEX is designed to provide "delayed action uncoupling". This permits you to push the cars after uncoupling without the couplers closing again.

Train operations become quite realistic, when you do not have to uncouple the cars and locomotives by hand. This can be done automatically using the uncoupling track section, along with the uncoupler light which adds greatly to the scenic effect. When the car is near the uncoupler light, a press of the control panel button will open the coupling leaving it standing from the rest of the train. Cars with the RELEX delayed action uncoupler can then be pushed by the locomotive without the couplers reengaging. By using this system a most realistic yard operation can be duplicated.

## TRACK-EXTENSION-PACKS (M)

## TRACK END BUMPERS

5090 TRACK EXTENSION PACK for extending track oval · Contains: 10 straight tracks 5106, 1 pair of electric turnouts 5202, 2 curve track 5206, 1 control panel 7072, 1 distributor panel 7209, two wood screws 78612 and two connecting cables · Instructions for the turnouts and track plans are included

**5090**

\$ 17.95

5091 TRACK EXTENSION PACK for extending an oval track · Contains: 2 curved track 5100, 10 straight track 5106, 1 pair of manual turnouts 5121 and an instruction booklet with track plans The 5090 and 5091 track packs can be used to extend the track ovals supplied with train sets 2955, 2975, 3121, 3200 and 3203.

\$ 1.00

**7191**  
\$ 1.75

7191 TRACK END BUMPER · With working signal light · Die cast metal buffer beam · 2¾" long

## THE MARKLIN-M-TURNOUTS AND HOW TO USE THEM

When laying out sidings parallel to the main line using 5117 and 5121 (Fig. 1) turnouts, use 5100 curve track for the reverse curve to obtain track center spacing of  $3\frac{1}{8}$ ". With 5202 (Fig. 2) and 5214 (Fig. 3) turnouts, use 5206 for the reverse curve to obtain track center spacing of 3". The illustration below shows some of the ways turnouts and track sections may be combined.

The electric remote control turnouts 5117, 5140 and 5202 and the double slip switches 5128 and 5207 are all operated by electric double solenoids, with working signal lamps to show which direction the points are set at all times. The points are non derailing as the train pushes the point aside and after the train passes the points return to their original setting. Extra turnouts can be connected directly to either end of other turnouts, giving you a big savings in space.

Four electric turnouts can be connected to one control panel (see page 52).

## MARKLIN-M-TURNOUTS 5100

### ELECTRIC TURNOUTS FOR REMOTE CONTROL OPERATION

**5128**  
\$ 8.95

**5117**  
\$ 10.95

**TURNOUTS FOR MANUAL OPERATION**  
**5121**  
\$ 4.75

5117 PAIR OF ELECTRIC REMOTE CONTROL TURNOUTS · One right hand, one left hand, both with double solenoids · Working signal lamps · Spring operated points · The track lengths are the same as 5100 and 5106

5121 PAIR OF MANUAL TURNOUTS · With hand lever and sprung points · Length of the track sections are the same as 5117

### WITH ELECTRIC SOLENOIDS FOR AUTOMATIC OPERATION

5128 DOUBLE SLIP SWITCH ·  $30^\circ$  crossing angle · Electric double solenoid · Working signal lamp shows whether set for crossing or diverging tracks · Hand lever for manual operation · The straight tracks are  $7\frac{1}{16}$ " long, and the curved tracks are  $7\frac{1}{2}$ " long

**5140**  
\$ 10.95

5140 ELECTRIC REMOTE CONTROL CURVED TURNOUTS · One right hand, one left hand with double solenoid · Working signal lamps · Spring operated points · Length and radius of the inner curve is the same as 5100 · The length of the outer curve is  $10\frac{1}{2}$ " long · Installation instructions are included with each pair

The curved turnouts provide cross-over facilities on curves, between inner and outer circles, while keeping regular three inch center spacing between tracks.

## MARKLIN-M-TURNOUTS 5200

### ELECTRIC TURNOUTS WITH DOUBLE SOLENOIDS FOR AUTOMATIC OPERATION

**5214**  
\$ 8.95

5214 THREE WAY TURNOUT, with electric double solenoids · Two hand levers for setting the points manually · Five connecting cables · The length of the straight track section is 7 inches and the radius of the curved sections is 18" · When used with the 5206 track sections the 3" track center spacing can be maintained (see Fig. 3, page 43)

**5202**  
\$ 10.95

5202 PAIR OF ELECTRIC REMOTE CONTROL TURNOUTS · One right hand and one left hand, both with double solenoids · Working signal lamps · The length of the curve track is  $\frac{5}{16}$  the length of 5200

**5207**  
\$ 8.95

5207 DOUBLE SLIP SWITCH · When used with the 5202 Turnouts the 3" track center spacing can be maintained · With double solenoid · Hand lever for manual operation · The straight track section is 7" long · Two 5208 make up track sections, each  $\frac{5}{16}$ " long, are included

## THE MÄRKLIN-CATENARY FOR MÄRKLIN-M-TRACK

The electric locomotives can pick up their current from the overhead contact wires with the same reliability as from the track stud contacts. The lever on the locomotives changes over the pickup from the bottom shoe to the pantograph. With the MÄRKLIN system it makes no difference in which direction the locomotives is placed on the track. For maximum operation it is advisable to connect the catenary system to a separate transformer. This will allow you to run two locomotives on the same track under independent control.

**7003** \$ .35

7003 FEEDER CABLE for supplying current to any point of the catenary system, especially in conjunction with tower masts · 24" long

7277 CONTACT WIRE SECTION FOR CROSSINGS 5114, 5128, 5207 and 5211

7020 SIMULATED WIRE TENSIONER · Clips to side of catenary masts for scenic effect

7022 INSULATOR SECTION CONTACT WIRE for interrupting current · With slide connection · 4½" long

7023 MAKE-UP CONTACT WIRE SECTION, with slide connections at each end · 4" long

The overhead contact wires, with their tensioning and cross span connections, are designed exactly as on the prototype. This is why the MÄRKLIN catenary system appears so realistic, both on single tracks and where cross spans are used over yards. The catenary masts are of a durable, flexible plastic, and are rugged and durable. The spring contact wire holders assure a reliable contact at all times and maintains a contact voltage.

Telescoping contact wires 7013 and 7023 adjust to any track dimension. Because of their flexibility, they fit any curve accurately, without any auxiliary equipment. The longest contact wire 7019 has been designed for use on long straight aways. Using the tower mast 7021 and the cross spans 7016 any width of track can be spanned. You need 2 mast and one cross span for the first four tracks and one mast and one span for each additional four tracks. The cantilever support arm 7025 can be installed for single tracks next to the tower masts.

## THE MÄRKLIN SIGNAL ASSORTMENT FOR MÄRKLIN-M-TRACK

Automatic Train Control Home Signals are designed to . . .

. . . automatically start and stop trains. The track is dead when the signal is red. Two built in ON-OFF track power switches control this whether the signal is operated by remote control from the panel, by the moving train with contact tracks, or operated manually.

. . . install without tools; no other equipment needed. The metal mounting plate locks under the track roadbed of straight and curved track to connect "ground".

. . . use the 7072 control panel (7072 \$ 2.00 see page 52) and the buttons will show which direction the signal is set.

. . . have built in color coded wiring. Match the colored plugs to the like colored sockets of the control panel. Slip the red wire connectors to the center track tongues before and after the insulation points. Simple illustrated instructions included with each signal.

. . . control trains operating from the catenary system. Feeder mast plugs into the signal; use insulator contact wire. No other equipment needed.

. . . provide you with an automatic, accident free operating layout. Thus you can operate several trains on schedule and still have lots of time to do yard switching and make up trains. And the colored lights add greatly to the scenic effect of your layout.

. . . offer completely prototype signaling including warning signals. These are installed as the home signals are and connect directly to the home signals. Thus you have an indication of the home signal setting even if it is behind a building.

One 7072 control panel can operate at least four home signals, connected with warning signals.

These home signals can all be used for automatic train control, whether used with the stud contact or the catenary system. The 7041 home signal has three coils, while all other home signals have two coils. The current switches can handle heavy loads because of their durable silver contacts.

The connecting wires have color coded plugs with side sockets, thus allowing extra plugs to be inserted. Sockets are incorporated into the signal base for connection to the catenary system and for "ground" connections. The masts are high detailed die cast metal. Scale lighting is provided by special bulbs. Track insulators, a base plate, and illustrated instructions are included.

### WARNING SIGNALS WITHOUT TRAIN CONTROL

**7036**  
\$ 5.95

7036 WARNING SIGNAL WITHOUT MOVING ARM with disc movable · Double solenoid · Signal lights change from amber/amber to green/green · Two blue cables for automatic operation · Connection to control panel or for working together with home signal · Yellow cable for current supply · The three plugs (red, green and yellow) have cross-sockets · For use in conjunction with the 7039 home signal · 1 1/8 in. wide, 2 5/8 in. long and 2 7/8 in. high

**7037**  
\$ 6.95

7037 WARNING SIGNAL with extra movable arm and fixed disc · Operation, lights and cables as No. 7036 · Lights change from amber/amber to amber/amber/green · For use in conjunction with the 7040 home signal · 1 1/8 in. wide, 2 5/8 in. long, 2 7/8 in. high

**7038**  
\$ 7.95

7038 WARNING SIGNAL with extra arm and disc both movable · Two double solenoids · Signal lights change either as No. 7036 or 7037 · Three blue cables with red, green and orange cross-plugs · Current supplied by yellow cable with yellow cross-plug · Used mostly in conjunction with the 7041 home signal · 1 1/8 in. wide, 2 5/8 in. long and 2 7/8 in. high

**7045**  
\$ 4.50

7045 UNIVERSAL REMOTE CONTROL SWITCH · Can be used for turning lighting current or train current on and off · Can be controlled by the control panel, by contact tracks or by the hand lever · The many functions of this unit, such as turning on and off station lights by passing trains, or overriding certain train control signal is fully covered in our Signal Manual

### FOR RAIL AND CATENARY

7039 HOME SIGNAL with one semaphore arm and signal light changing from red to green · 1 1/8 in. wide, 2 3/4 in. long and 5 in. high

7040 HOME SIGNAL with two coupled semaphore arms and signal lights changing from red to green/amber · 1 1/8 in. wide, 2 3/4 in. long and 5 in. high

7041 HOME SIGNAL with two independently working semaphore arms · The operation is the same as other train control signals, but in addition a third solenoid with an additional blue cable with orange plug allows three separate signal indications · Signal lights change from red to green, or from red to green/amber · 1 1/8" wide, 3 7/8" long and 5" high

7187 COLOR LIGHT DISTANT SIGNAL · For use only in conjunction with the 7188 colour-light home signal · Signal lights change from green/green to amber/amber by four bulbs in all · 5/8 in. wide, 7/16 in. long, 2 3/8 in. high

7188 COLOR LIGHT HOME SIGNAL · Two signal lights change from red to green, with automatic train control · Hand lever for manual operation · Pair of sockets for connection with the 7187 Distant Signal · 1 1/8" wide, 2 3/4" long and 3 1/2" high

**5004** \$ .35

5004 CONNECTING CABLE for center track tongue connection · 30" long

**5015**  
\$ .25

**5022**  
\$ .10

5015 INSULATION MARKER for identifying insulation points  
5022 CENTER TRACK TONGUE INSULATOR · For insulating five track joints

The M-Track can be connected directly to the bridges. When using the K-Track, the straight adapter section 2191 (see page 47) is required.

The track sections of the bridges and approaches are fitted with center stud contacts.

With these different bridge parts any size and combination of bridge can be built. The 7064 and 7065 bridge piers fit together to any height desired, in increments of 1/4 inch. The baseplates 7066 provide a most realistic foundation for your bridge unit.

## BRIDGES FOR MÄRKLIN M-TRACK

**7162**  
\$ 1.75

**7162 TRUSS BRIDGE** · Can also be connected with the 7163 bridge as the beginning of a larger structure · Grey · With 5100 type track built in · Slot for 7011 bridge mast · 1 1/8" high · 7" long

**7163**  
\$ 5.95

**7163 ARCH BRIDGE** · Grey · With 5100 type track built in · 2 slots for 7011 bridge mast · 4 5/8" high · 14" long

**7161**  
\$ 1.50

**7161 PLATE GIRDER BRIDGE** · Grey · With integral centre stud contact track and slots for the 7011 catenary supports for the overhead contact wire · 1 in. high · 7 in. long

**7168**  
\$ 1.50

**7168 STRAIGHT APPROACH SECTION** · Grey · With integral centre stud contact track · 7 in. long

**7167**  
\$ 1.50

**7167 CURVED APPROACH SECTION** · Grey · With the same curve as the 5100 track section · Integral centre stud contact track · 7 1/2 in. long

Approach sections, together with bridge piers, are suitable for building up straight and

curved approaches. Integral centre stud contact tracks are provided, with slots for the 7011 catenary supports for the overhead contact wire (see page 44).

### Basic H0 Gauge Track Layouts for M-Track

Oval with passing track

Size 58 1/4 by 33 1/2 in.

Track sections: Eleven 5100, one 5103, ten 5106, one 5108, one pair of 5117 or 5121 points

Oval with two passing tracks

Size 80 7/16 by 33 2/3 in.

Track sections: Eleven 5100, one 5103, eighteen 5106, four 5206, two 5214

Double-track oval with passing track and sidings

Size 107 by 36 1/5 in.

Track sections: Eleven 5100, one 5103, sixty-one 5106, one 5107, three 5108, one 5111, one 5140, ten 5200, two 5202, four 5206, one 5207, four 5214

Double-track oval with double reversing loop  
Size 106 3/10 by 36 1/5 in.

Track sections: Eleven 5100, one 5103, forty-three 5106, four 5107, four 5108, four 5110, one 5111, twelve 5200, two 5202, four 5208, four 5210, one 5211, four 5214

## BRIDGE PIERS

**7064**  
\$ .50

**7064 PIER** · 1 1/4" high · Fair Trade prices in US Dollars

**7065**  
\$ .30

**7065 PIER** · 1/4" high · Very suitable for building bridge approach grades with a 1/4" rise between sections · Plastic

**7066**  
\$ .25

**7066 BASEPLATE** for use as foundation · Green · 1/8" high · Plastic

**0206**  
\$ 3.75

**0206 TRACK PLANNING TEMPLATE** · Transparent plastic · An indispensable aid for designing track plans · 1:10 scale covers all track sections for the series 5100/5200

**7171**  
\$ 2.00

**7171 SOUND DEADENING RUBBER STRIPS** · 50 pieces with 50 flat head wood screws · The rubber strips hold the track above the train board · A hollow shoulder extends through the track screw hole to insulate the screw head · Slim flat head screws hold the track firmly to the board · Instructions supplied also show how to mount turnouts, points, and crossings · Catenary masts lock under the roadbed without screws · Test have shown that the noise of running trains on plywood is reduced 50% with these sound deadening strips

**7002 RERAILING RAMP** to help in placing rolling stock on the layout · 12" long · 3/4" high

For more information on these booklets see page 53.

## MÄRKLIN-K-TRACK 2100 (K=Plastic)

### Straight Track Sections

-  **2100**  
Full length = 7" **\$.45**
-  **2101**  
Half length = 3 1/2" **\$.45**
-  **2102**  
1/4 length = 1 3/4" **\$.40**
-  **2104**  
1/8 length = 7/8" **\$.40**

### Equalizing Straight Track

-  **2106**  
6 5/8" long **\$.45**
-  **2107**  
6" long **\$.45**
-  **2108**  
1 1/2" long **\$.40**

### Crossing · 22° 30' crossing angle

-  **2159**  
Straight section 6 5/8" long **\$ 3.00**

### Straight Feeder Track

-  **2190**  
Full length = 7" · With two connecting clips, marked "O" and "B" **\$ 1.00**

### Straight Contact Track

-  **2199**  
Half length = 3 1/2" **\$ 2.00**

The contact track sections permit automatic control of all impulse operated electrical accessories such as points, signals, etc. They are activated by the pickup shoe on the locomotive. Two sets of contacts, one operating in each direction the train travels, carry different switching functions, independently of each other.

### Uncoupler Track Section

-  **2197**  
Half length = 3 1/2" **\$ 3.50**
- For automatic uncoupling of rolling stock · The uncoupling ramp in the center of the track can be operated electrically from the control panel or by hand with the lever on the side

### STRAIGHT ADAPTER TRACK

-  **2191**  
Full length = 7" **\$ 1.00**
- For use when connecting 5100/5200 type track to 2100 type track

-  **7504** **\$.20**
-  **7522** **\$.15**
- 7504 TERMINAL FOR CENTER STUD CONTACTS · Connected at the rail joints of 2100 Series track to provide current
- 7522 INSULATOR FOR CENTER STUD CONTACTS · This is placed between the copper contacts of the 2100 Series track for electrical insulation

### The five circles of MÄRKLIN-K-Track:

- 1 Industrial circle 2110 = 8 Full sections
- 1 Standard radius I 2121 = 12 Full sections
- 1 Standard radius II 2131 = 12 Full sections
- 1 Wide radius I 2141 = 12 Full sections
- 1 Wide radius II 2151 = 12 Full sections

The MÄRKLIN-K-Track 2100 use the same stud contact system as described, with its advantages, on page 41. Both running rails are mounted on highly detailed plastic ties. The stud contacts—barely visible—project through the ties from below, and when used with the pickup shoe on the locomotive assure an extremely reliable current pickup system. The rails are connected by rail joiners, stud contact connectors, plus a snap coupling of the plastic tie strip. To fasten the K-track to the board use a small 1/2" long brad.

### Curved Track Sections

- 12" Radius Industrial circle**  
 **2110** **\$.50**  
Full length = 45°
- 17" Radius Standard radius II**  
 **2131** **\$.50**  
Full length = 30°
- 15" Radius Standard radius I**  
 **2121** **\$.45**  
Full length = 30°
-  **2123** **\$.45**  
Half length = 15°
-  **2124** **\$.40**  
1/4 length = 7° 30'
- 17" Radius Standard radius II**  
 **2132** **\$.50**  
3/4 length = 22° 30'
-  **2133** **\$.45**  
Half length = 15°
-  **2134** **\$.45**  
1/4 length = 7° 30'
-  **2135** **\$.45**  
1/8 length = 3° 45'

### Curved Contact Track

-  **2129**  
Half length = 15°  
15" Radius **\$ 2.00**

### Curved Contact Track

-  **2139**  
Half length = 15°  
17" Radius **\$ 2.00**

### K-TRACK EXTENSION PACK

The Track Packs 2090 and 2091 are designed for extending the track oval as supplied in Train Sets of the 2815 and 3184 Series.

- 2090** **\$ 21.95**
- 2090 TRACK EXTENSION PACK for extending oval tracks · Contains: 8 straight track 2100, 2 straight track 2107, 4 straight make-up track 2108, 2 curve track 2132, 1 pair of electric remote turnouts 2161, 1 control panel 7072, 1 distributor panel 7209, 2 mounting screws and 2 connecting cables · Complete instructions and track plans are included

- 2091** **\$ 12.95**
- 2091 TRACK EXTENSION PACK for extending oval tracks · Contains: 8 straight track 2100, 2 straight track 2107, 4 straight make-up track 2108, 2 curve track 2132, 1 pair of manual turnouts 2164 · Instruction book with track plans is included

### Curved Track Sections

- 21 1/2" Radius Wide radius I**  
 **2141** **\$.65**  
Full length = 30° **New**
- 24" Radius Wide radius II**  
 **2151** **\$.65**  
Full length = 30° **New**

-  **7500** **\$.35**
- GROUND TERMINAL  
Terminal for connecting the ground wire to 2100 Series track

-  **7391** **\$.75**
- TRACK END BUMPER

in riveted steel construction design · Snaps into the rails · Black with red and white striped buffer beam · Length: 1 1/2" · Mounting screw supplied

**MÄRKLIN-  
K-TRACK 2100  
TURNOUTS**

2160 DOUBLE SLIP SWITCH · 22° 30' frog angle · 17" radius · Switch points operated electrically by double solenoid · Has hand lever for manual operation · Length of straight track section: 6 5/8" long

Double Slip Switch

**2160**  
\$ 8.95

Electric Remote Control Turnouts

2161 ELECTRIC REMOTE CONTROL TURNOUTS (POINTS) · One right hand and one left hand, switch points operated by double solenoid · Scale switch points · Frog angle 22° 30' · Radius of curve section is 17" · Working indicator lights · Length of straight section: 6 7/8"

**2161**

# 7200 MÄRKLIN SIGNALS FOR MÄRKLIN K + M TRACK

The Light Home Signals and the Siding Signal of the 7200 series are equipped with contacts for automatic operation of trains, whether picking up power through the center contact on the track or from the catenary system. The masts of these signals can be installed on the layout separately from the solenoid control unit. In this case the mounting plate 7230 is required to connect the mast to the track. When using the signals with 5100/5200 series track the 7231, 7232 and 7233 mounting plates are required to connect to "ground". When used with 2100 series track, 7531, 7532 and 7533 are required.

**7242** 7242 DWARF SIDING SIGNAL · Lights change from red/red (stop) to white/white (proceed with extreme caution) and start and stop the trains automatically · 2 light bulbs in housing · Lever for hand operation · Width: 1 1/8" · Length: 3 3/4" · Height: 3/4"

**\$ 8.95**

**7245** 7245 UNIVERSAL TRAIN CONTROL · Can be used for automatically running trains and for automatically turning on and off lighting current · The control can be operated by track contacts or from the control panel · Lever for hand operation · The many uses of this control are covered in the instructions and the Signal Manual · Width: 1 1/8" · Length: 2 3/4" · Height: 3/8"

**\$ 5.00**

7539 LIGHT HOME SIGNAL · Lights change from red (stop) to green (proceed) by manual operating with simultaneous control of the traction current in the central conductor of the solidly attached piece of track · An additional piece of track 3 1/2" long with interrupted stud contacts · Width: 2" · Length: 3 1/2" · Height: 3 1/2"

**7539**  
**\$ 4.95**

7539 for K-Track only

**New**

## REMOTE CONTROLLED LOADING CRANE

This two motored crane, which may be rotated continuously in either direction, has an adjustable boom. Fully extended it will reach approximately 4 3/4" beyond the base, for up to three parallel tracks on any side. Surprisingly heavy loads can be lifted with the hook. The removable electric magnet will pick up—and deposit—ferrous metal objects including the loads on container cars. This crane will add much interest to your layout and provide a most realistic loading operation. The push button controller provides precise remote control.

**7051**  
\$ 33.95

**7051 REMOTE CONTROL LOADING CRANE WITH LIFTING MAGNET** · One motor rotates the boom and control cab, 360° in either direction · A second motor operates the geared spool for raising and lowering the hook · A light in the cab shows when the electro-magnet is on · Complete with a simple control panel with indicators, color coded, plug in wiring and complete instructions · Base 3 1/2" square, 10 1/2" high · Price does not include, locomotive, cars or track

Fair Trade prices in US Dollars

To connect K-track 2100 to the automatic turntable 7186 use straight adapter track 2191 (see page 47).

## AUTOMATIC TURNTABLE

**7186**  
\$ 44.95

**7186 REMOTE CONTROLLED TURNTABLE** · 14 inch outside diameter · Table turns 360° in either direction and stops automatically at each track · Complete with control panel, connecting cables and illustrated instructions · Current is automatically shut off in all tracks not aligned with turntable track

**7028**  
\$ 24.95

## LOCOMOTIVE ROUNDHOUSE

**7028 ROUNDHOUSE** for three tracks, with skylights, smoke jacks, realistically painted in three colors · Doors open and close automatically · (Track not included) · 18 1/8" x 14 3/8" x 5 1/4"

Our illustration shows two roundhouses used with the automatic turntable to give a realistic miniature reproduction of the original.

A turntable and roundhouse help to complete your model railroad. The turntable is used to turn locomotives so that they can be sent back out onto a new run. In addition the turntable serves to distribute the locomotives to the different stalls of the roundhouses. The turntable and roundhouse can also be used for diesel locomotives as well as steam locomotives as many areas are servicing both locomotives in the same facilities. All tracks not in contact with the turntable bridge have the current turned off, so no other switch is needed.

## FOR MÄRKLIN HO LOCOMOTIVE:

### H0 Rubber Tires

Price for one item For locomotives:  
**7152** 3048, 3094, 3097, 3098

## GRADE CROSSINGS WITH AUTOMATIC GATES

**7192 ELECTRIC OPERATED GRADE CROSSING GATES** with M-Track sections · The grade crossing has two automatic electric gates operated by the train · Crossing guards shed (designed to accept interior lighting) · Complete with instructions and two control tracks.

The crossing operates entirely automatic, the gates closing as soon as a train runs onto the track control section in front of the gates, and open again automatically when the train leaves the last section of control track after the crossing.

For multi-track operation the 7192 crossing gates can be used with the 7193 extension set. The automatic operation will still be retained.

The 7192 in use with the 7193

**7193**  
\$ 3.95

**7228 DISTRIBUTOR PANEL** · With five wire clamps insulated from each other · 1 1/2" long · 3/8" wide

## ELECTRONIC WARNING HORN

The series of MÄRKLIN Locomotives listed under 7213 have provision for installing the warning horn. One or several may be sounded by pressing the button of the 7215 Horn Sounding Unit, placed between the feeder track and the transformer. It supplies special power to operate the horn, but not the motor, of the locomotive when they are standing still on the track, transformer speed control knob off ('0').

The Horn Running control 7216 is added between the Horn Sounder and the feeder track to make the horn sound on running locomotives.

Finally, to sound the horn of a locomotive standing on a 'dead' track at a signal or insulated track section, the 7217 Horn Signal Control is added to bridge the electrical insulation point.

The tone of the 7213 Horn is the high pitched sound as found on European Locomotives.

A moving train can sound its horn automatically by using contact tracks and the 7045 Universal Remote Switch, or 7245 (see pages 45 and 49). For contact tracks see pages 41 and 47.

## HORN EQUIPMENT FOR MÄRKLIN LOCOMOTIVES

**7213**

\$ 3.50

**7213 WARNING HORN COMPLETE** · Ready to install in MÄRKLIN locomotives 3022, 3034, 3035, 3036, 3037, 3038, 3039, 3040, 3043, 3050, 3051, 3053, 3059, 3060, 3061, 3066, 3067, 3068, 3070, 3073, 3075 and some models of 3021 · No soldering is required · In certain models of 3021 one lead must be soldered · Complete with illustrated installation instructions

**7216**

\$ 4.50

**7216 HORN RUNNING CONTROL** · For use in conjunction with the Horn Sounder 7215, to sound the horn when a locomotive is stopped or running · One red connecting cable with plug · 2" x 1 1/4" x 1"

**7215**  
\$ 15.95

**7215 HORN SOUNDING UNIT** · For sounding the locomotive horn · Three connecting cables, red, brown and yellow, with plugs · 3" x 2 1/8" x 1"

**7217**  
\$ 4.00

**7217 HORN SIGNAL CONTROL** · For use with the Horn Sounder when ever a locomotive is stopped by a home signal in the "dead" section of track · Two connecting cables · 2" x 1 1/4" x 3/8"

Complete operating instructions are supplied with the horn sounder.

**THE MAGAZINE  
FOR ALL  
MODEL  
RAILROADERS  
ARTICLES  
ON PROTOTYPE  
AND MODEL  
RAILROADS**

The MÄRKLIN-magazine is full of interesting reports of developments of the MÄRKLIN products, model railroad ideas and reports of real railroads. The magazine is topical, up to date, and provides much worthwhile information for all railway enthusiasts. Modeling tips, track plans, equipment plans, plus many interesting photos. MÄRKLIN-magazine is available only in the German language. The magazine is published four times a year and costs \$ .90 per copy.

It's easy to wire using the MÄRKLIN color coded system:

- Red = For running trains. From transformer to center track studs or overhead catenary contact wires
- Yellow = Lighting and electrically operated accessories
- Brown = Ground wire return from track, accessories and control panels
- Blue = Blue ground wire from magnetically operated accessories (turnouts, signals, etc.) to control panels or contact tracks

**7197**  
\$ 3.00

7197 INTERIOR LIGHTING UNIT for passenger coaches 4050, 4072 and 4073 · Contains 7198 current pickup shoe, lucite lighting bar, and two light sockets with bulbs · Provides full length, diffused lighting as on the prototype · Instructions included

## MÄRKLIN TRANSFORMERS ARE SAFE AND RELIABLE

The sheet steel case and heavy insulation of the MÄRKLIN transformers, tested at several thousand volts, make them absolutely safe. A built in circuit breaker turns off the transformer automatically should there be a short circuit in the layout. The transformer plugs into the house circuit with a heavy duty, UL approved line cord.

The speed of the locomotive increases as you turn the control knob to the right, decreases as you turn it to the left. The same control knob reverses the locomotive. Rotate the knob left, past "0" momentarily, thus activating the 24 volt reversing circuit. The locomotive is automatically reversed. The locomotives can be operated at a slower speed with the 30 VA 6100 Series Transformer, than with the 16 VA 6500 Series.

We guarantee perfect operation of our trains, only when original MÄRKLIN transformers are used.

MÄRKLIN Transformers of the 6100 and 6500 Series have plug in connections for operating trains and accessories.

Fair Trade prices in US Dollars

16 VA

30 VA

# MÄRKLIN

TRANSFORMER · Output 16 VA · Weight 3 lbs. · Size 4 3/4" x 3 3/4" x 3"

TRANSFORMER · Output 30 VA · Red pilot light · Weight 4 1/2 lbs. · Size 6 1/8" x 5 1/8" x 3"

THE POWER REQUIRED BY LOCOMOTIVES AND ACCESSORIES HAS BEEN CALCULATED AS FOLLOWS:

With maximum load, 3000 loco takes 9 VA, 3021 loco takes 12 VA and the 3048 loco about 15 VA. The power left over can be used for accessories with each lamp using approximately 1 VA.

**6507** = 115 Volt \$ 14.95

**6153** = 110 Volt \$ 21.95

The transformers that are supplied with the starter sets on page 2, have the same general specifications as these transformers. The only difference is their smaller capacity.

## NO. I GAUGE

Over thirty years have passed since we last offered large size trains in the No. I Gauge, but apparently the memory of this fine large scale line has lasted over the years. We have been receiving increasing numbers of requests for No. I gauge trains and we have decided to bring out in 1969 an exciting series of No. I Gauge Trains. These have been designed with all the modern designs and engineering that we have developed through the years. This provides you with a train that has all the details and working features of the real trains, including sprung buffers and working doors on the locomotives.

No. I Gauge trains are built to 1 : 32 scale,  $\frac{3}{8}$ " equals 1'. It does require more room than our H0 trains, a minimum track circle being 48" in diameter. This is ideal either for a basemeter or spare room layout, or for the maximum enjoyment build your layout in the yard or the patio. Our track is designed to be left outdoors with no harm from sun or moisture. Imagine the fun of actually using real plants and terrain for building your miniature railroad while following natural grades and obstacles in your yard. Though No. I Gauge trains used to be priced quite high, we have been able, by using our new modern methods of manufacture, to bring the price of these trains within the reach of the average family. Check with your dealer soon and see for yourself the many advantages of MÄRKLIN No. I Gauge.

## TRAIN SETS NO. I GAUGE

Use the MÄRKLIN 6153 transformer to operate your No. I Gauge Railroad.

# TRACK

### NO. I GAUGE TRACK

The running rails, mounted on plastic ties and insulated from each other, not only guide the wheels but supply current to the locomotive. The track sections are connected by rail joiners on each rail, plus a clip on the base of the plastic tie strip. The rails are made from solid stainless, non-rusting weather resistant metal, except for 5910 and 5941.

**5900** 5900 STRAIGHT TRACK SECTION · 12" long

The MÄRKLIN No. I Gauge trains operate with 16 volts A.C., the same as we use for our H0 scale trains. This provides you with all the many advantages you have come to enjoy with our smaller trains. The direction of the locomotive is changed only by switching the direction from the transformer. Although this train operates on the two rail system, there is no polarity problems because of the A.C. power. Reverse loops, crossings, or wye tracks offer no special problems.

We offer two distinct types of track: A hollow profile track for use on indoor layouts only; and a solid, stain resistant rail, mounted on thermal plastic ties for use either indoors or outdoors. Either type will give you a track system that is quite flexible in design and scale in appearance.

## MÄRKLIN MINIATURE AUTOMOBILES IN 1:43 SCALE

DIE CAST METAL WITH MOVABLE PARTS

Each car has been designed to give you a collectors piece with the finest features and details possible. Doors, hoods and trunks open and close, the windows have clear plastic inserts, full interiors are provided and scale rubber tires complete these exquisite models.

## MÄRKLIN

Your collection of cars can be enlarged with the 8000 series cars—Fire Engine, Farm Tractor, Crane Truck, Gasoline Truck, Self Propelled Excavator, Dump Truck etc. Please see your dealer for the special flyer with the complete collection of MÄRKLIN Miniature Automobiles.

**MÄRKLIN *Sprint***

*Built in the popular 1:32 scale, a minimum of space is required for the MÄRKLIN Sprint raceway. The track is designed to clip together very strongly for complete electrical and mechanical connection, yet goes together and comes apart with ease. No fussing around with track sections that do not fit and are hard to connect. Thus your track will stand up even under very long and hard usage.*

*Your race track can be built with two, four or six lanes, long straight aways, esses, banked curved, inclines, overpasses, chicanes, lane crossovers and many other exciting accessories including our reliable lap counter. Everything is available to build up almost any racing circuit and, wherever required, to safeguard all your tracks with strong crash barriers.*

*Every MÄRKLIN racing car is a miniature masterpiece. The high speed motor is located in the best position for correct center of gravity, providing good road holding ability. In addition, a special designed gear train is installed so that the car can respond to any small change in voltage. This means short, quick braking action before curves and immediate acceleration during the curve. It also gives you superior hill climbing ability on MÄRKLIN incline sections. Because of these many features, MÄRKLIN race cars can attain unbelievably fast lap times.*

*Another feature typical of the high MÄRKLIN quality is the solid ski type current pick up of the cars. They are sprung and are thus very reliable for current pick up, while at the same time they provide a cleaning action on the pick up rails.*

*The tires of the cars can be changed and adapted to the running characteristics of the track.*

*The speed controller can be operated without any steps in the speed regulation or it can be set to uniformly increase step by step. Using the built-in key, the controller can be locked in a given voltage and then released with the panic switch in case of emergency. The hand controller can be connected to the track at any location that is convenient to you.*

**1:32**

*A host of suggestions for building different exciting raceways are contained in the interesting MÄRKLIN Sprint Handbook. It also contains racing rules for many different types of races, always providing thrilling entertainment in your home, for all participants, young and old.*

Running the lightning fast slot cars in the MÄRKLIN Sprint sets provides an exciting hobby quite different from our model railroads. Thus both hobbies compliment each other.

**GIFT BOXES**

All of our sets come in beautiful gift boxes. Look for this colorful packaging at your dealer.

### Curved Track Sections

**1261** CURVED TRACK SECTION, 45° · Two lanes · Mean radius 18"  
\$ 2.25

**1220** CURVED TRACK SECTION, 90° · Two lanes · Mean radius 6"  
\$ 1.50  
1205, 1220, 1241, 1261 with connections for current supply

### Curved Track Sections

**1221** CURVED TRACK SECTION, 45° · Two lanes · Mean radius 6"  
\$ 1.00

**1241** CURVED TRACK SECTION, 45° · Two lanes · Mean radius 12"  
\$ 1.35

### Inclines

**1290** STRAIGHT TRACK SECTION FOR START OF INCLINE · With two lanes and connection for current supply · Concave slope; start and finish of the track form an angle of about 30° · Length 8<sup>3</sup>/<sub>5</sub>"  
\$ 1.50

**1291** STRAIGHT TRACK SECTIONS FOR FINISH OF INCLINE as 1290, but convex slope  
\$ 1.50

**1268** \$ 2.50

BANKED CURVE 45° · Two lanes · Mean radius 18"

**1248** \$ 2.25

BANKED CURVE 45° · Two lanes · Mean radius 12"

1546 BANK CURVE SUPPORTS · Contains: 7 width supports, three 5" high supports, four 3" high supports, and twelve connectors · Made of plastic · For use when widening banking to four lanes

**1546** \$ 5.95

1290 STRAIGHT TRACK SECTION FOR START OF INCLINE · With two lanes and connection for current supply · Concave slope; start and finish of the track form an angle of about 30° · Length 8<sup>3</sup>/<sub>5</sub>"

## MÄRKLIN-METAL CONSTRUCTION SETS

**1009**  
\$ 7.50

**1010** \$ 10.50

**1011**  
\$ 15.95

**1012** \$ 29.95

1009 BASIC SET · Contains 135 constructional parts · The box measures 15 1/4" by 10" by 1 1/2" and weighs 1 lb. 15 oz. · Can be made up into Basic Set 1010 by Supplementary Kit 1029

1010 BASIC SET · Contains 176 constructional parts · The box measures 16" by 12" by 1 1/4" and weighs 2 lb. 5 oz. · Can be made up into Basic Set 1011 by Supplementary Kit 1030

1011 BASIC SET · Contains 242 constructional parts · The box measures 20 1/4" by 13 3/4" by 1 1/4" and weighs 3 lb. 14 oz. · This is one of the favourite Construction Sets, as models from all branches of engineering can be made from the constructional parts it contains, the illustrated Instruction Book supplied with is giving a wide selection to choose from · Can be made up into Basic Set 1012 by Supplementary Kit 1031

1012 BASIC SET · Contains 396 constructional parts · The box measures 20 3/4" by 13 3/4" by 1 1/2" and weighs 6 lb. 13 oz. · This 1012 Set extends the number and realism of the models considerably, as among the many other models that can be built from it there are, for example, diesel locomotives, tramcars and maintenance cars for the overhead trolley wire, motor lorries, tractors, mobile slewing cranes up to tower slewing cranes and windmills · Models such as surface grinders, highspeed drilling machines, and pendulum and frame saws, can also be built without any difficulty · This Set can be made up into Basic Set 1013 by Supplementary Kit 1032

## AND THEIR ADVANTAGES

MÄRKLIN is synonymous with quality, and so what children are given to play with is not a matter for indifference—playthings that are accurately made will provide an education for accurate work in later life.

Playing with these MÄRKLIN Metal Construction Sets will reveal and develop technical and creative talents even in the early years of youth.

MÄRKLIN Metal Construction Sets are branded products of high quality; they can be had in six Basic Sets and six Supplementary Kits. MÄRKLIN Supplementary Kits enable each Basic Set to be made up into the next larger Set following. Each Basic Set contains a large assortment of constructional parts with an illustrated instruction Book showing numerous interesting examples.

A number of very instructive models can be built with even the smallest Set.

All parts in the Sets are made of best materials and enamelled in colors.

All gear wheels—except the universal gear—have machine-cut teeth and turned bosses or hubs, instead of the stamped and riveted sheet metal parts so often used otherwise. Colored casings give the models a colorful appearance closely resembling the real thing. A great advantage is that these color plates can be bent at right angles and the lines of the bends then smoothed out again. Electrical parts—such as commutators, field or magnet coils, cables etc., are also included in the assortment contained in Set 1013 and the following ones, so that an insight can be gained into the fundamental laws of electricity. The great variety of separate parts can be still further augmented by special parts obtainable from all shops selling MÄRKLIN Models and Sets.

| Basic Set No. | Number of parts | Supplementary Kit No. | Number of parts |
|---------------|-----------------|-----------------------|-----------------|
| 1009          | 135             | 1029                  | 42              |
| 1010          | 176             | 1030                  | 67              |
| 1011          | 242             | 1031                  | 164             |
| 1012          | 396             | 1032                  | 308             |
| 1013          | 703             | 1033                  | 307             |
| 1014          | 1006            | 1034                  | 1100            |

## SUPPLEMENTARY SETS

Any Basic Set can be made up to the next larger one by a Supplementary Kit, the parts of the latter added to the existing Set forming the new larger Basic Set. If, for example, you have the 1009 Basic Set and want to make it up to the contents of Basic Set 1010, then you should get the 1029 Supplementary Kit.

### SUMMARIZED:

|                                   |          |                                       |
|-----------------------------------|----------|---------------------------------------|
| Supplementary Kit No. <b>1029</b> | \$ 4.50  | makes up Set 1009 into Basic Set 1010 |
| Supplementary Kit No. <b>1030</b> | \$ 7.25  | makes up Set 1010 into Basic Set 1011 |
| Supplementary Kit No. <b>1031</b> | \$ 15.95 | makes up Set 1011 into Basic Set 1012 |
| Supplementary Kit No. <b>1032</b> | \$ 27.95 | makes up Set 1012 into Basic Set 1013 |
| Supplementary Kit No. <b>1033</b> | \$ 29.95 | makes up Set 1013 into Basic Set 1014 |

### SUPPLEMENTARY SETS

Extends Basic Set 1014 a stage further

Apart from the Supplementary Kits mentioned above, every MÄRKLIN Metal Construction Set can be expanded by extra parts if your Set does not contain sufficient of them for some model you wish to make. A separate list of these parts, as well as the actual parts themselves, can be obtained from every toyshop that deals in MÄRKLIN products.

## ELECTRIC MOTORS FOR USE WITH CONSTRUCTION SETS

These motors can be used to power any models that have been built with the MÄRKLIN Construction Set, and this will add much more pleasure and enjoyment to the model.

**1071**  
\$ 10.95

1071 ELECTRIC MOTOR, reversible, to run either forward or backward · No-load speed about 1500 r.p.m. · Runs on 16 volts from MÄRKLIN model railway transformer · Supplied complete with two cables · 2<sup>1</sup>/<sub>2</sub>" high, 2" wide and 2" deep · Weight 7 oz.

**1072**  
\$ 19.95

1072 ELECTRIC MOTOR to run on 16 volts, with cables and switch for reversing the running direction · Two cord or spring band pulleys running in opposite directions at different speeds controlled by the transformer · No-load speeds about 3000 and 1100 r.p.m. · An extremely efficient motor, suitable for driving the largest models made up from the Construction Sets, as well as working models of all kinds · (We advise using only a Group 6100 transformer) · With three connecting plugs · 2<sup>1</sup>/<sub>3</sub>" high, 3<sup>3</sup>/<sub>4</sub>" wide and 1<sup>1</sup>/<sub>2</sub>" deep · Distance between pulley grooves 3<sup>1</sup>/<sub>2</sub>" · Weight 23<sup>1</sup>/<sub>2</sub> oz.
